Clinical Excellence Division

Health Provider Portal Release Notes (Build 5.7.1)

The Health Provider Portal permits General Practitioners to access The Viewer.

The Viewer allows General Practitioners access to summary details of patient's treatment, investigations and care at any Queensland Health facility statewide.

What's new for General Practitioners?

Two enhancements have been made to The Viewer:

- QCOR reports in The Viewer
- Acute Management Plans in The Viewer (Ipswich and Redlands)

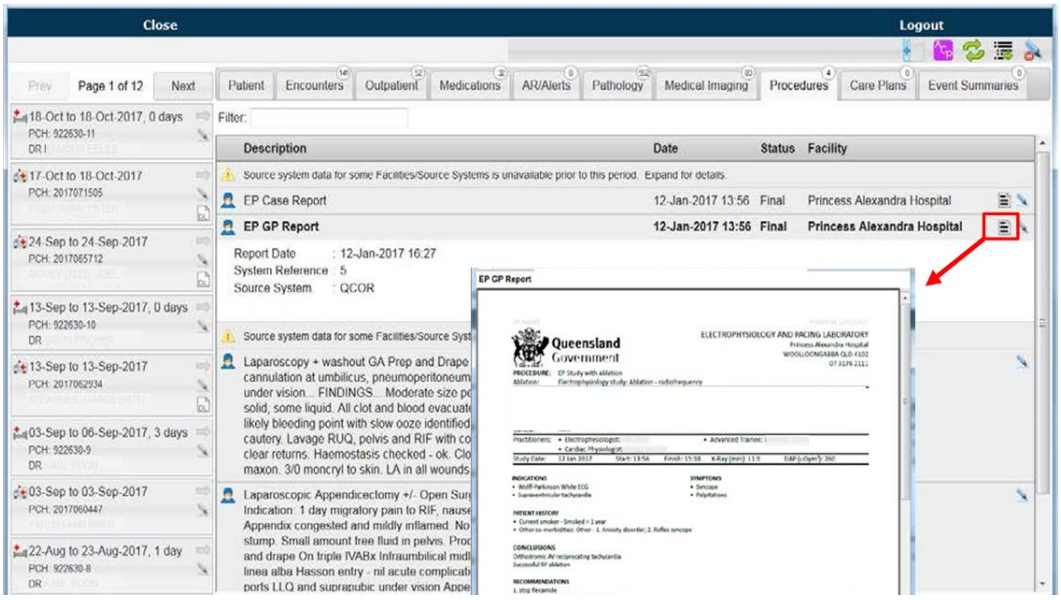
QCOR reports in The Viewer

Background

The state wide Cardiac Clinical Network has established a clinical registry and quality program. The Queensland Cardiac Outcomes Registry (QCOR) is one of the most comprehensive cardiac registries in Australia, incorporating data elements required for National/International standards and links with QH enterprise systems allowing the QCOR data to be fed into relevant national registries.

What's changed

An enhancement has been made in The Viewer and Electrophysiology reports from QCOR are now available under the procedures tab. A document icon will appear next to the report, on clicking on the icon the report will open up in a new window.

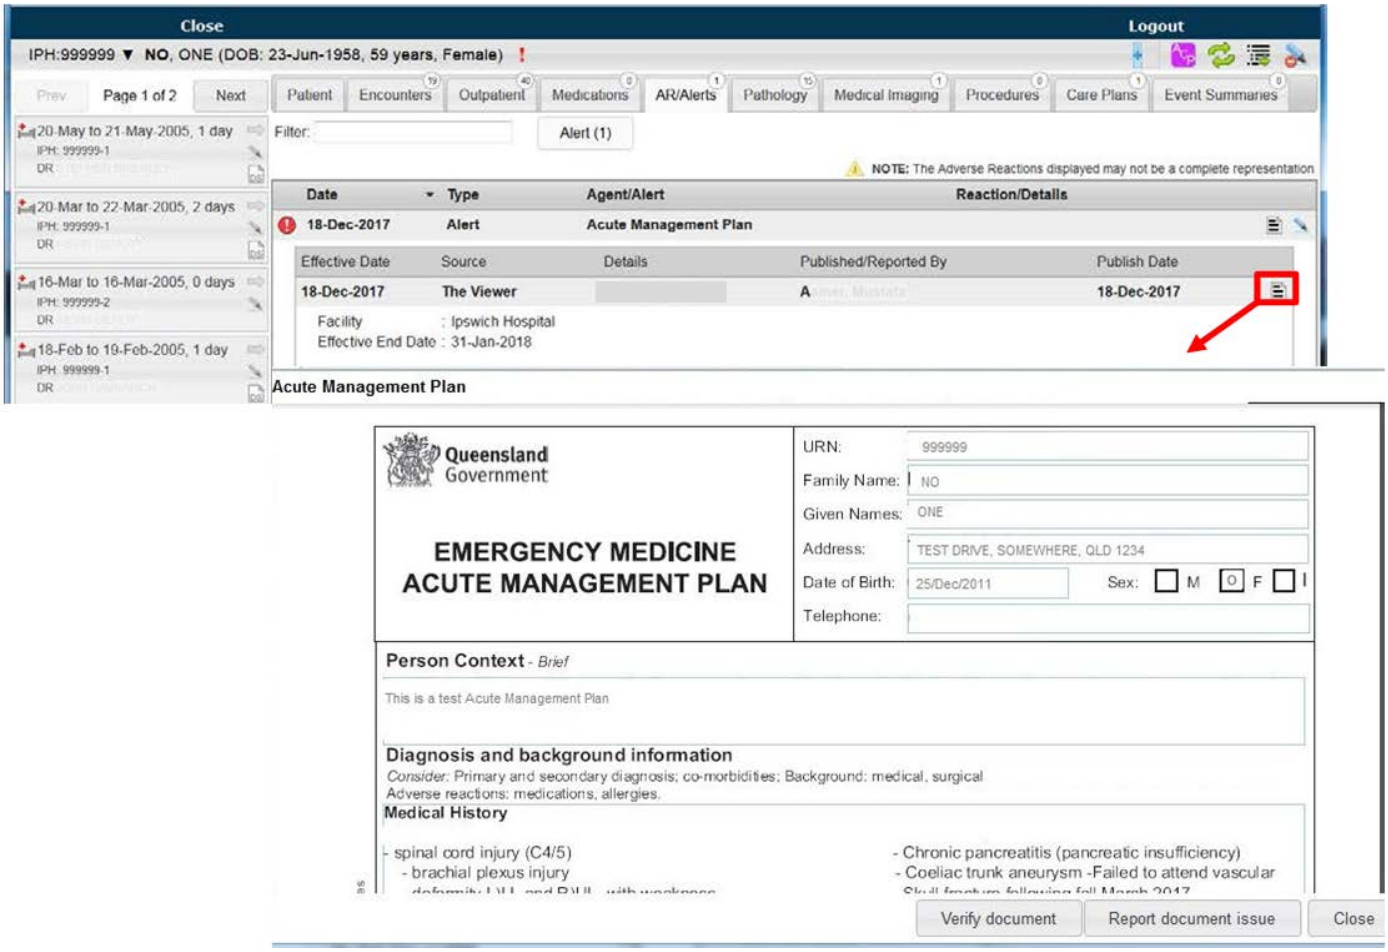


Please note, currently the 8 sites sending Electrophysiology reports to The Viewer are: Mackay, Townsville, RBWH. PAH, Cairns, SCUH, TPCH and GCUH.

Acute Management Plans in The Viewer (Ipswich and Redlands)

Background

Currently selected staff members at Metro North have the capability to upload Emergency Medicine Acute Management Plans (AMP) in The Viewer. This functionality is being extended to Ipswich and Redlands.

What's changed


An enhancement has been made in The Viewer and selected users from the Emergency Department at Ipswich and Redlands will now be able to upload/remove and audit AMP documentation to the application. The Emergency Medicine AMP documentation is located under the AR/Alerts tab in The Viewer
