A Cultural Support Person is required?	Yes N	0	chest infection, heart and lung complications, and		

B. Condition and treatment

The doctor has explained that you have the following condition: (Doctor to document in patient's own words)

If Yes, is a Cultural Support Person present? Yes No

This condition requires the following procedure. (Doctor to document - include site and/or side where relevant to the procedure)

Left wrist Yes No Right wrist Yes No

The following will be performed:

Stiffening of the wrist procedure requires a cut down the back of the wrist and placement of a plate or wires. A cut may be made over one of the hipbones, and a bone graft taken which is used to help stiffen the joint. A plaster cast will be put on and left in place for about 6 weeks.

C. Risks of a wrist arthrodesis procedure

There are risks and complications with this procedure. They include but are not limited to the following.

General risks:

- Infection can occur, requiring antibiotics and further treatment.
- Bleeding could occur and may require a return to the operating room. Bleeding is more common if you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).

- chest infection, heart and lung complications, and thrombosis.
- Heart attack or stroke could occur due to the strain on the heart.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.
- Death as a result of this procedure is possible.

Specific risks:

- The surgery may fail, requiring re-operation and/or bone graft.
- The plate may break which may or may not require surgical removal.
- The cut over the hip may become infected. This may need treatment with antibiotics and/ or further
- Infection in the wound. This may need treatment with antibiotics and further surgery.
- Abnormal pain response to surgery with worsening of pain and disability.
- The surgical cut may cause changes to the sensation and colour of the limb.
- In some people, healing of the wound may be abnormal and the wound can be thickened and red and the scar may be painful.

G. Patient consent

I acknowledge that the doctor has explained;

- my medical condition and the proposed procedure, including additional treatment if the doctor finds something unexpected. I understand the risks, including the risks that are specific to
- the anaesthetic required for this procedure. I understand the risks, including the risks that are specific to me.
- other relevant procedure/treatment options and their associated risks.
- my prognosis and the risks of not having the procedure.
- that no guarantee has been made that the procedure will improve my condition even though it has been carried out with due professional care.
- the procedure may include a blood transfusion.
- tissues and blood may be removed and could be used for diagnosis or management of my condition, stored and disposed of sensitively by the hospital.
- if immediate life-threatening events happen during the procedure, they will be treated based on my discussions with the doctor or my Acute Resuscitation Plan.
- a doctor other than the Consultant may conduct the procedure. I understand this could be a doctor undergoing further training.

I have been given the following Patient Information Sheet/s:

☐ About Your Anaesthetic *OR*☐ Anaesthetic: Nerve Block

- Wrist Arthrodesis
 I was able to ask questions and raise concerns with the doctor about my condition, the propose
- with the doctor about my condition, the proposed procedure and its risks, and my treatment options. My questions and concerns have been discussed and answered to my satisfaction.
- I understand I have the right to change my mind at any time, including after I have signed this form but, preferably following a discussion with my doctor.
- I understand that image/s or video footage may be recorded as part of and during my procedure and that these image/s or video/s will assist the doctor to provide appropriate treatment.

On the basis of the above statements,

	I request to have the procedure

Consent Information - Patient Copy Wrist Arthrodesis

What do I need to know about this procedure?

Stiffening of the wrist. It requires a cut down the back of the wrist and placement of a plate or wires.

A cut may be made over one of the hipbones, and a bone graft taken which is used to help stiffen the joint.

A plaster cast will be put on and left in place for about 6 weeks.

2. My anaesthetic

This procedure will require an anaesthetic.

See About Your Anaesthetic OR Anaesthetic: **Nerve Block** for information about the anaesthetic and the risks involved. If you have any concerns, discuss these with your doctor.

If you have not been given an information sheet, please ask for one.

3. What are the risks of this specific procedure?

There are risks and complications with this procedure. They include but are not limited to the following.

General risks:

- · Infection can occur, requiring antibiotics and further treatment.
- Bleeding could occur and may require a return to the operating room. Bleeding is more common if you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).
- Small areas of the lung can collapse, increasing the risk of chest infection. This may need antibiotics and physiotherapy.
- Increased risk in obese people of wound infection, chest infection, heart and lung complications, and thrombosis.
- Heart attack or stroke could occur due to the strain on the heart.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.
- Death as a result of this procedure is possible.

Specific risks:

- The surgery may fail, requiring re-operation and/or bone graft.
- The plate may break which may or may not require surgical removal.
- The cut over the hip may become infected. This may need treatment with antibiotics and/ or further surgery.
- Infection in the wound. This may need treatment with antibiotics and further surgery.
- Abnormal pain response to surgery with worsening of pain and disability.
- The surgical cut may cause changes to the sensation and colour of the limb.

•	In some people, healing of the wound may be
	abnormal and the wound can be thickened and
	red and the scar may be painful.

Notes to talk to my doctor about:
