Attention residents

Important health advice

Mosquito-borne diseases

Mosquito breeding increases after rain or flooding, and it is important that residents help prevent outbreaks of mosquito-borne disease.

- **Make sure you wear insect repellent if you are being bitten. When cleaning up your house and yard following a flood, get rid of potential mosquito breeding sites to prevent outbreak of mosquito-borne disease.**
- **Rain or floodwater may have collected in containers around your yard, so make sure you empty them and store them in a dry place or throw them away.**
