

ACKNOWLEDGEMENTS:

2nd Edition 2007

Editor: Peter Hiatt (Queensland Pathology, Cairns Base Hospital). The major contributions from Alex Stephenson and May Smith are recognised from the original 2001 version. **Desktop Publishing:** Sue Crocker and Kathryn Dougherty.

1st Edition 2001

The Handbook for the Collection, Storage and Transport of Pathology Specimens in Rural and Remote Queensland was originally funded by the Queensland Health Quality Improvement and Enhancement Program (QIEP) through the Rural and Remote and Pathology Quality System Program Areas. The development of the Handbook was guided by the members of a small reference group: Paul Bailey, Rhonda Bilin, May Smith, Alex Stephenson, Meegan Symonds, Lyn Overton (Queensland Health); and Geoff King, Dianne Heggie, Suzanne Hood (RFDS). Rosanna Pappalardo (RFDS) assisted in the desktop publishing and preparation for publication.

Alex Stephenson (QHPS, Cairns Base Hospital) and May Smith Project Officer, Rural and Remote Program Area (QIEP) were responsible for the detailed development, collection, research and assemblage of the Handbook. Their exceptional effort is acknowledged. The 1998 edition of the Queensland Health Pathology & Scientific Services Pathology Laboratory, Cairns Base Hospital Pathology Handbook was used as the primary source of material for this handbook. The information provided in the microbiology section has been referenced extensively from the Royal Brisbane Hospital booklet – “Collection of Specimens for Microbiological Examination and Guidelines for the Laboratory Investigation of Selected Infectious Diseases”. The Wide Bay Area (QHPS) supplied many of the photographs.

The illustrations and the accompanying procedures in the microbiological section were obtained from the Faculty of Sciences (Nursing), University of Southern Queensland, Toowoomba (“Microbiology and Immunisation: collection of clinical specimens for microbiological examination”. USQ, Unit 67421). Staff from several Queensland Health Pathology Service and the North Queensland Rural Health Training Unit were also involved in the compilation and development of this Handbook.
