Licensing – Use of Laser Apparatus for Dermatology

The Radiation Safety Act 1999 requires all persons who use radiation apparatus to hold an appropriate licence issued by the Chief Executive, Queensland Health. These use licences may only be issued to persons who have appropriate skills and knowledge of the principles and practices of radiation protection, as well as expertise in the use of the radiation apparatus. Under the Act, laser apparatus is considered to be radiation apparatus.

This information sheet outlines the licensing requirements for persons who wish to use laser apparatus for dermatology.

What is a laser apparatus?

A laser apparatus is:

(a) a laser that could reasonably be used to carry out a diagnostic, therapeutic or cosmetic procedure involving the irradiation of a person

(b) an apparatus that, if assembled or repaired, and when energised, is capable of emitting an amount of non-ionising radiation higher than the accessible emission limit for a class 3B laser for the relevant period, stated in, and measured in accordance with, the laser standard AS2211 (ie. a class 4 laser).

When is a licence required?

All persons who use laser apparatus must hold an appropriate use licence issued under the Radiation Safety Act 1999.

Knowledge and practical competencies

The practice of dermatology does not just involve the use of laser apparatus, it also requires sound clinical management of the patient, ie. thorough understanding of biology, physiology, pathology, anatomy of skin, types of skin lesions, wound healing, scar management and pain management. Persons seeking a licence to use laser apparatus for dermatology are therefore required to demonstrate an appropriate level of clinical knowledge in addition to knowledge of laser safety and competency in the use of the laser apparatus.

The Australasian College of Dermatologists (ACD) has implemented a structured training program in the use of laser apparatus, and has recommended a training schedule for various dermatological and other procedures. The ACD also has a theoretical and clinical assessment involving laser apparatus as part of the final examinations. Consequently, all of the College’s recent fellows are considered to have sound knowledge in laser safety and are competent in the use of laser apparatus.

However, as laser apparatus may be used for a variety of purposes by dermatologists, details of the applicant’s experience need to be considered when determining whether the applicant is competent in the use of laser apparatus. This will ensure that applicants have sufficient experience in the use of laser apparatus across the breadth of the specialty.
Eligibility for a licence

Applicants will be considered eligible for a licence to use laser apparatus for the purpose of dermatology if, in addition to completing the application form and providing the appropriate licence fee, they meet the requirements of one of the following alternatives:

Alternative one

Applicants must:

- submit evidence that they have been admitted as a fellow of the Australasian College of Dermatologists (ACD) in or after 1990 and, if prior to 1990, provide evidence that they have participated in ACD continuing education training programs
- provide evidence of their current registration with the Medical Board of Queensland listing dermatology as a specialty
- be able to demonstrate to the Chief Executive, Queensland Health that they have sufficient experience in the use of laser apparatus for dermatological purposes. Verification of use from a colleague or a statement detailing the applicant’s work history relevant to the use of laser apparatus would be sufficient.

Alternative two

Applicants must:

- provide evidence of their current registration with the Medical Board of Queensland listing dermatology as a specialty
- provide evidence that they have satisfactorily completed a laser safety course, specifically approved by the Director, Radiation Health for the training of persons seeking a licence to use laser apparatus for dermatology, within three years of the application being submitted
- be able to demonstrate to the Chief Executive, Queensland Health that they have sufficient experience in the use of the laser apparatus for dermatological purposes. Verification of use from a colleague or a statement detailing the applicant’s work history relevant to the use of laser apparatus would be sufficient.

Approved laser safety courses

A list of approved laser safety courses suitable for persons seeking to obtain a use licence for dermatology, is available on request from Radiation Health.

Persons who have completed a course which has not been approved should submit full details of the course for consideration by Radiation Health.

Procedure for application

An application for a licence to use laser apparatus must be made to the Chief Executive, Queensland Health through the licensing officer, Radiation Health. Application forms are available from Radiation Health. Licences granted remain current for the term specified on the licence and are subject to any conditions in the legislation and any additional conditions attached to the licence. Applications for renewal of licences must be made prior to the expiry of the current licence.
