Commonly used substances

- **CNS Stimulants** (e.g. Cocaine, Nicotine, Ketamine, Ecstasy, Amphetamines)
- **CNS Depressants** (e.g. Codeine, Heroin, Morphine, Methadone, Oxycodone, Alcohol)
- **Hallucinogens** (e.g. LSD, Phencyclidine (PCP))
- **Selective Serotonin Reuptake Inhibitors (SSRI)** and **Serotonin-noradrenaline reuptake inhibitors (SNRI)**
Psychosocial assessment

- Detailed antenatal history to screen for:
  - Risk of postnatal depression
  - Psychological distress
  - Other mental health issues
  - Domestic violence
- Respond, refer and support woman
Assessment of substance use

• Use validated screening tools
• Ask about history of substance use:
  ◦ Alcohol and Tobacco
  ◦ Licit and illicit drugs (prescribed and non-prescribed)
  ◦ Over the counter
  ◦ Complimentary
• Ask about willingness to stop use each visit
Blood borne viruses

• Screen all women for:
  ◦ Hepatitis B (HBV)
  ◦ Hepatitis C (HCV)
  ◦ Human Immunodeficiency virus (HIV)

• Re-screen women with continued high risk drug behaviour

• Support seropositive women
Hepatitis B virus (HBV)

- Refer to infectious diseases specialist
- Follow-up of sexual and household contacts required (counselling, testing, vaccination)
- Obtain consent for Hepatitis B immunoglobulin (HBIG) and HBV vaccine administration to baby
Human Immunodeficiency (HIV)

• Refer to infectious diseases specialist
• Reduced risk of transmission with:
  ◦ Elective caesarean section
  ◦ Antiviral therapy
• Discuss alternatives to breastfeeding baby
Hepatitis C virus (HCV)

- Refer to infectious diseases specialist or hepatologist
- No increased risk to baby
- Advise about bleeding nipples
Antenatal support

• Explore options for known carer and continuity of care models

• Non-judgemental approach

• Refer and link with appropriate services (e.g. treatment and prevention programs, mental health services, drug and alcohol services, smoking cessation)
Antenatal care

• Risk of intermittent or no antenatal care
• Discuss importance of dental health, diet and Folic Acid supplementation
• Increased risk of fetal growth restriction
Antenatal care

• Antenatal discussion re:
  ◦ Care of baby
  ◦ Length of stay
  ◦ Monitoring
  ◦ Potential for medication
  ◦ Follow up

• Involve paediatric/neonatal services
Pain relief

• Discuss options for analgesia:
  ◦ Pharmacological and non-pharmacological

• Refer for anaesthetic review antenatally:
  ◦ May require regional anaesthesia
  ◦ Larger doses of analgesia
  ◦ Review venous access

• Seek specialist advice, planning and documentation for pain management
Labour and birth

- Advise woman to present early in labour to minimise need for self-medication and monitor drug use
- Take drug history and recent use on admission
Postnatal

• Provide usual care
• Refer for ongoing surveillance and management
  ◦ Medical problems
  ◦ Drug and treatment programs
  ◦ Smoking cessation programs
Breastfeeding

• Undertake individual risk-benefit analysis
• Contraindicated if HIV positive
• Advise woman:
  ◦ Not recommended where persistent use of Heroin or stimulants
  ◦ Not using substances including alcohol and tobacco is preferable to not breastfeeding
  ◦ Limit alcohol to 2 standard drinks per day and not immediately before breastfeeding
Substances and breastfeeding

- **Benzodiazepines**
  - Short acting may be used for limited time
  - Do not breastfeed immediately after dose

- **Amphetamines**
  - Do not breastfeed for 24 hours after dose
  - Express and discard milk
  - Have a supplementary feeding plan
Parent education

• Safe sleeping including:
  ◦ Smoke free environment
  ◦ Risk minimisation if continuing substance use

• Substance use and care of baby including safety plan

• Advice for future pregnancies
Discharge

• Support woman to remain in hospital with baby
• Home visiting by midwife/child health
• Formal handover from hospital to community services
• Active engagement by community services
