Reduction of Fractured Nose

Facility:

A. Interpreter / cultural needs

An Interpreter Service is required?   □ Yes □ No
If Yes, is a qualified Interpreter present?   □ Yes □ No
A Cultural Support Person is required? □ Yes □ No
If Yes, is a Cultural Support Person present?   □ Yes □ No

B. Condition and treatment

The doctor has explained that you have the following condition: (Doctor to document in patient's own words)

This condition requires the following procedure. (Doctor to document - include site and/or side where relevant to the procedure)

The following will be performed:
Reduction of fractured nose is an operation to straighten the nose.

C. Risks of a reduction of fractured nose

There are risks and complications with this procedure. They include but are not limited to the following.

General risks:
- Infection can occur, requiring antibiotics and further treatment.
- Bleeding could occur and may require a return to the operating room. Bleeding is more common if you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).
- Small areas of the lung can collapse, increasing the risk of chest infection. This may need antibiotics and physiotherapy.
- Increased risk in obese people of wound infection, chest infection, heart and lung complications, and thrombosis.
- Heart attack or stroke could occur due to the strain on the heart.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.
- Death as a result of this procedure is possible.

Specific risks:
- Bleeding. This may occur either at the time of surgery or in the first few weeks after surgery. Bleeding after surgery may require packing of the nose under local anaesthesia or may require another operation to stop the bleeding. A blood transfusion may be necessary depending on the amount of blood lost.
- Reopening of pre-existing wounds.
- Infection. This is usually treated with antibiotics but is rare.
- Failure to straighten the nose with a persistent unsatisfactory cosmetic appearance requiring further manipulation or requiring formal corrective surgery at a later date.
- Complications of the bones of the skull or eye piece.

D. Significant risks and procedure options

(Doctor to document in space provided. Continue in Medical Record if necessary.)

E. Risks of not having this procedure

(Doctor to document in space provided. Continue in Medical Record if necessary.)

F. Anaesthetic

This procedure may require an anaesthetic. (Doctor to document type of anaesthetic discussed)
G. Patient consent

I acknowledge that the doctor has explained;

- my medical condition and the proposed procedure, including additional treatment if the doctor finds something unexpected. I understand the risks, including the risks that are specific to me.
- the anaesthetic required for this procedure. I understand the risks, including the risks that are specific to me.
- other relevant procedure options and their associated risks.
- my prognosis and the risks of not having the procedure.
- that no guarantee has been made that the procedure will improve my condition even though it has been carried out with due professional care.
- the procedure may include a blood transfusion.
- tissues and blood may be removed and could be used for diagnosis or management of my condition, stored and disposed of sensitively by the hospital.
- if immediate life-threatening events happen during the procedure, they will be treated based on my discussions with the doctor or my Acute Resuscitation Plan.
- a doctor other than the Consultant may conduct the procedure. I understand this could be a doctor undergoing further training.

I have been given the following Patient Information Sheet/s:

☐ About Your Anaesthetic
☐ Reduction of Fractured Nose

- I was able to ask questions and raise concerns with the doctor about my condition, the proposed procedure and its risks, and my treatment options. My questions and concerns have been discussed and answered to my satisfaction.
- I understand I have the right to change my mind at any time, including after I have signed this form but, preferably following a discussion with my doctor.
- I understand that image/s or video footage may be recorded as part of and during my procedure and that these image/s or video/s will assist the doctor to provide appropriate treatment.

On the basis of the above statements,
1. What is a reduction of fractured nose?
A reduction of a fractured nose is a procedure to straighten the nose.

2. My anaesthetic
This procedure will require an anaesthetic.
See About Your Anaesthetic information sheet for information about the anaesthetic and the risks involved. If you have any concerns, discuss these with your doctor.
If you have not been given an information sheet, please ask for one.

3. What are the risks of this specific procedure?
There are risks and complications with this procedure. They include but are not limited to the following.

General risks:
- Infection can occur, requiring antibiotics and further treatment.
- Bleeding could occur and may require a return to the operating room. Bleeding is more common if you have been taking blood thinning drugs such as Warfarin, Asprin, Clopidogrel (Plavix or Iscover) or Dipyridamole (Persantin or Asasantin).
- Small areas of the lung can collapse, increasing the risk of chest infection. This may need antibiotics and physiotherapy.
- Increased risk in obese people of wound infection, chest infection, heart and lung complications, and thrombosis.
- Heart attack or stroke could occur due to the strain on the heart.
- Blood clot in the leg (DVT) causing pain and swelling. In rare cases part of the clot may break off and go to the lungs.
- Death as a result of this procedure is possible.

Specific risks:
- Bleeding. This may occur either at the time of surgery or in the first few weeks after surgery. Bleeding after surgery may require packing of the nose under local anaesthesia or may require another operation to stop the bleeding. A blood transfusion may be necessary depending on the amount of blood lost.
- Reopening of pre-existing wounds.
- Infection. This is usually treated with antibiotics but is rare.
- Failure to straighten the nose with a persistent unsatisfactory cosmetic appearance requiring further manipulation or requiring formal corrective surgery at a later date.
- Complications of the bones of the skull or eye piece.
