Hiprex tablets
Patient information

What Hiprex tablets are used for:
Hiprex may be used to treat and prevent urinary tract infections. It is important to take Hiprex regularly to prevent urinary tract infections. Do not wait for symptoms. Hiprex is a urinary antiseptic that fights bacteria in the urine and bladder. It works by helping to acidify the urine and maintain a low urinary pH. Hiprex may be used for short term or long term treatment.

Before using Hiprex:
Some medical conditions may interact with Hiprex. Tell your doctor or pharmacist if you have any medical conditions:

- Kidney or liver problems
- If you are pregnant, planning to become pregnant, or are breastfeeding
- Do not take Ural sachets while taking Hiprex
- If you are on a course of antibiotics for any reason, cease Hiprex then restart the full course of antibiotics until finished.

How much to take:
- Adults and children over 12 years—1g twice daily
- Children 6-12 years—500 mg to 1g twice daily
- Do not use with children under six years.

How to use Hiprex:
- Use Hiprex as directed by your doctor
- Take Hiprex by mouth with food (e.g. breakfast and dinner)
- Take each dose with a full glass of water. Plenty of fluid should be consumed while taking Hiprex
- You can break up or crush the Hiprex tablet if you wish
- Before you begin using an antacid, check with your doctor or pharmacist.
