Palliative care services

Module overview

Please note: This module must be read in conjunction with the Fundamentals of the Framework (including glossary and acronym list).

Palliative care is the care of people who are expected to die in the near future due to a progressive, life-limiting illness. Palliative care also includes the support of the dying person’s family and/or carers. Through a network of specialist and primary care providers and community partnerships, palliative care services aim to support terminally ill people to live as they choose until death. Palliative care services play an important role in helping families and carers cope during the patient’s illness and with subsequent bereavement.

Palliative care is multidisciplinary care delivered by coordinated medical, nursing, allied health, pastoral care and social services. Palliative care integrates the physical, psychological, social, spiritual and cultural aspects of care. The right of each patient to make informed choices in their own time about the care they receive, and the environment in which they receive that care, is integral to effective palliative care services. Consequently, patients with highly complex symptom management issues may choose to return home for end-of-life care with the understanding they have direct access to only the lower level palliative care services in their chosen place of care.

Palliative care service delivery should be based on quality management principles complying with the Standards for Providing Quality Palliative Care for all Australians. These standards incorporate key principles considered essential for all palliative care services, including:

- comprehensive assessment and management of symptoms
- consultation and coordination
- patient access to support
- continuity and coordination of care
- public health initiatives
- comprehensive discharge planning
- bereavement support
- education
- family and carer access to support
- staff and volunteer support
- research
- respite care.

Pastoral carers provide spiritual care as one aspect of the holistic approach to palliative care services for patients and families. While pastoral carers are not generally part of the palliative care workforce, they are integral members of the multidisciplinary team. Access to pastoral / spiritual care is essential for all levels of palliative care services, as are processes to assist referrals to appropriate pastoral or spiritual care services.

Historically, patients with advanced cancer (and their families and/or carers) have been the most common recipients of palliative care. However, terminally ill people suffering from other progressive diseases also benefit from palliative care services. Terminal progressive diseases include, but are not limited to, end-stage organ failure, progressive neurological conditions, acquired immunodeficiency syndrome, frailty, dementia and the end-stage of inherited metabolic disorders.
Palliative care services need to be responsive to the individual needs of patients and their families and/or carers. In particular, services should be sensitive to the palliative care requirements of special needs groups and their families including:

- Aboriginal and Torres Strait Islander peoples
- people from culturally and linguistically diverse backgrounds
- children and young people
- people who live in residential care and/or other institutions (including prisons)
- people who are homeless or financially disadvantaged
- adults with impaired decision-making capacity (including those with an intellectual disability)
- people with mental illness
- people living in rural and remote communities.

Although the general principles and basic approach of palliative care apply to children, adolescents and adults, there are important differences between these age groups, which must be addressed when providing children’s palliative care. Please refer to the relevant children's services module/s.

The differences associated with children’s palliative care include:

- variations in patient diagnoses
- developmental, psychological and social needs of children
- the unique place of children as dependent members of families
- particular ethical issues involved where minors are concerned
- physiological factors relating specifically to children and their illnesses.

Children’s palliative care recognises children have complex clinical and support needs, while their family and/or carers have an increased emotional burden and the risk of complicated grief.

Consultative or outreach palliative care services are generally provided from higher level palliative care services (Levels 4, 5 and 6) to lower level services (Levels 1, 2 and 3).

### Service networks

In addition to the requirements outlined in the Fundamentals of the Framework, specific service network requirements include:

- evidence of clinical networks at all levels of palliative care services to ensure evidence-based care is provided by multidisciplinary teams in both ambulatory and/or inpatient acute settings
- multidisciplinary teams work in an interdisciplinary manner (i.e. work collaboratively, holding regular meetings to discuss patient status and the evolving plan of care) and increase their capability as patients require greater complexity of care
- documented processes between higher level service networks and oncology services, including haematology services, radiation oncology services, diagnostic services (including high-quality imaging and pathology services), interventional pain management services, surgical and medical subspecialties, medication services and allied health services
- documented processes for referral to services at other levels.

### Service requirements

In addition to the requirements outlined in the Fundamentals of the Framework, specific service requirements include:

- providing patient and carer information about the service and other support services
- assisting patients to achieve their achievable goals
- addressing the needs of family (including bereavement support)
- supplying appropriate support in the case of complicated bereavement
- providing support mechanisms for staff and volunteers
- providing relevant clinical indicator data to satisfy accreditation and other statutory reporting obligations
- evidence of home visiting protocols, if applicable.

**Workforce requirements**

In addition to the requirements outlined in the *Fundamentals of the Framework*, specific workforce requirements include:

- access to a multidisciplinary mix of staff with competency-based skill levels and defined roles in order to deliver safe and effective care, including, but not limited to, bereavement counsellors, dieticians, occupational therapists, pharmacists, physiotherapists, psychological and emotional support services, social workers and speech pathologists, as required
- all health professionals involved in the care of palliative patients are educated about the psychosocial impact of life-limiting illness for the patient and family, and in the management of issues associated with dying, death and bereavement
- where children’s palliative care is provided, a range of professional healthcare providers have experience in paediatrics and have undertaken, or are working towards, a children’s palliative care qualification.

**Specific risk considerations**

In addition to risk management outlined in the *Fundamentals of the Framework*, specific risk considerations for palliative care services include:

- lack of patient / family preparedness for death
- suboptimal symptom management and support, particularly for patients choosing to return home for end-of-life care
- lower level services may have reduced access to pathology services able to deal with urgent requests, with the potential for delays in the diagnosis and treatment of conditions such as hypercalcaemia
- inability to provide cover for planned leave of key staff or volunteers
- local conditions can affect staffing levels of specialist and non-specialist palliative care clinicians, with the potential to affect the support and supervision structures for patients and their families and/or carers.

<tr>
<td><strong>Service description</strong></td>
<td>□ provides support for palliative care of clients/patients living in the community.</td>
<td>□ provides care for palliative patients in ambulatory and/or inpatient settings and is clearly identified as desiganted palliative care service.</td>
<td>□ provides ambulatory and/or inpatient care for palliative patients with moderately complex symptom management needs.</td>
<td>□ has capacity to manage full range of clinically and/or psychosocially complex issues experienced by palliative care patients and/or their families/caregivers.</td>
<td>□ provides palliative care unit with capacity to manage highest level of patient risk and/or complexity and is able to provide highly complex symptom management.</td>
<td>□ intrinsically linked to Level 5 and/or Level 6 services from other disciplines.</td>
</tr>
<tr>
<td>□ care provided is generally low-complexity care; however, palliative care clients/patients with complex needs may choose to live where they have access only to Level 1 services.</td>
<td>□ has established links with higher level palliative care services.</td>
<td>□ may either provide major care for patient who is home- or community-based, or provide input and support to primary providers of this care.</td>
<td>□ intrinsically linked to Level 5 and/or Level 6 services from other disciplines.</td>
<td>□ also provides extensive range of interventional and diagnostic services.</td>
<td>□ also provides extensive range of interventional and diagnostic services.</td>
<td>□ provides palliative care unit with capacity to manage highest level of patient risk and/or complexity and is able to provide highly complex symptom management.</td>
</tr>
<tr>
<td>□ services provided during business hours and may be provided in the home, community or ambulatory settings.</td>
<td>□ may be advice and guidance provided from higher level services via mechanisms such as telehealth consultations or remote ward visits.</td>
<td>□ may not have its own outreach into community or provide inpatient care, but will work in collaboration with services providing such care.</td>
<td>□ may include off-site ambulatory services such as home visiting by nursing and/or allied health staff, for which a service agreement may be in place with third-party provider.</td>
<td>□ part of service network with higher level services in palliative care or other specialties, ensuring access to latest evidence-based care and treatment information.</td>
<td>□ part of service network with higher level services in palliative care or other specialties, ensuring access to latest evidence-based care and treatment information.</td>
<td>□ intrinsically linked to Level 5 and/or Level 6 services from other disciplines.</td>
</tr>
<tr>
<td>□ provided primarily by registered nurses with generalist qualifications or other non-medical health practitioners.</td>
<td>□ may access local medical services through registered medical practitioner (general practitioner).</td>
<td>□ may include allocated palliative care beds.</td>
<td>□ coordinated by health professional with experience, knowledge and skills in palliative care with access to a multidisciplinary team.</td>
<td>□ provides palliative care unit with capacity to manage highest level of patient risk and/or complexity and is able to provide highly complex symptom management.</td>
<td>□ provides palliative care unit with capacity to manage highest level of patient risk and/or complexity and is able to provide highly complex symptom management.</td>
<td>□ intrinsically linked to Level 5 and/or Level 6 services from other disciplines.</td>

**Table note:**  
*On-site* means staff, services and/or resources located within the health facility or adjacent campus including third party providers.  
*Accessible* means ability to utilise a service (either located on-site or off-site) or skills of a suitably qualified person (who may be either on-site or off-site)—without difficulty or delay—via various communication mediums including but not limited to face-to-face, telehealth, telepharmacy, and/or outreach.
Legislation, regulations and legislative standards

In addition to what is outlined in the *Fundamentals of the Framework*, palliative care services must comply with:

- *Criminal Code (Palliative Care) Amendment Act 2003.*

Non-mandatory standards, guidelines, benchmarks, policies and frameworks (not exhaustive & hyperlinks current at date of release of CSCF v3.2)

In addition to what is outlined in the *Fundamentals of the Framework*, the following are relevant to palliative care services:
