

# Queensland survey analytic system (QSAS)

## Conditions of use

### Citation and User disclaimer

**Citation for publicly available data:** Queensland Health. Queensland survey analytic system (QSAS), [User to insert QSAS page name, access date]. Available from: <https://www.health.qld.gov.au/phsurvey>.

**Citation for custom request:** Queensland Health. Queensland survey analytic system (QSAS), Published and unpublished results. Queensland Government: Brisbane; 2020.

**User disclaimer**—QSAS Users are to include the following disclaimer on material that contains QSAS results:

“Results from the Queensland adult/child preventive health survey were sourced from the Queensland survey analytic system ([www.health.qld.gov.au/phsurvey](http://www.health.qld.gov.au/phsurvey)). Reproduction and interpretation of these results was solely the responsibility of the authors and may not reflect the views of the Queensland Department of Health.”

**Regional data users also include:** “Official Queensland statistics are based on annual data whereas regional statistics are based on two combined (pooled) annual surveys. For regional comparisons, comparable state level pooled results were used—these will differ from current official Queensland statistics (available from [www.health.qld.gov.au/phsurvey](http://www.health.qld.gov.au/phsurvey)).”

### Queensland Health disclaimer

The information in QSAS was prepared by the Queensland Department of Health, Preventive Health Branch. The Department has taken great care to ensure the information is correct and accurate. The Department does not guarantee, and accepts no legal liability whatsoever arising from, or connected to, the use of this information.

### User obligations

Users of QSAS material agree to the following:

1. Users must appropriately reference the data source and include the User disclaimer.
2. Users must exercise their own skill and care with respect to their use of this information and should carefully evaluate the accuracy, currency, completeness and relevance of the material for their purposes.
3. Users are strongly encouraged to refer to Preventive Health Branch data quality and statistical inference standards in Methods for reporting population health status and to adopt these or comparable standards.
4. Users must include any statistical notes included in this documentation or displayed in visualisation in any reproduction of QSAS information.

5. Results that do not meet statistical reliability criteria are suppressed. Users must not generate or disseminate omitted results.
6. QSAS contains aggregate results. The underlying unit record file (URF) data were collected by telephone survey with a complex sampling design requiring analysis using specialist statistical software. Using QSAS results to calculate additional statistics (for example creating new regions, population subgroups, or indicators) is statistically inappropriate and will not produce valid results. Such approaches are strongly discouraged.
7. Official Queensland statistics are based on annual data whereas regional statistics are based on two annual surveys that have been combined (pooled). QSAS uses comparable state pooled results to assess whether regional results are significantly different from Queensland, therefore, statewide pooled results may differ from official Queensland statistics.
8. The information on this website is periodically updated and Users are responsible for ensuring that they are using the most up-to-date information.
