		Rheumatic Heart Disease	2	15		

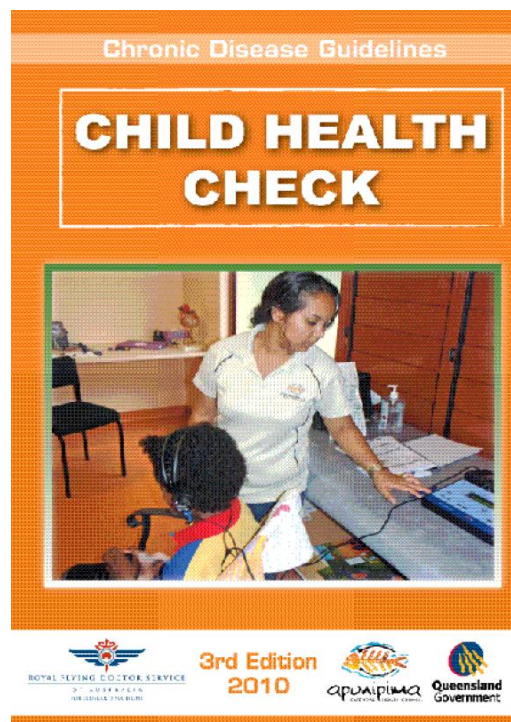

PaRROT Pathways to Rural and Remote Orientation Training
a Primary Health Care approach

The Child Health Check course is based on the Chronic Disease Guidelines 3rd edition 2010.

The Chronic Disease Guidelines is developed every two years, in line with the most current evidence on best practice prevention, early detection and management of chronic diseases in rural and remote and primary health care settings

The Child Health Check Manual is included as a separate manual within the Chronic Disease Guidelines. It provides information on childhood screening including a step by step guide to conducting checks, providing brief intervention and referring to further care if needed.

PaRROT Pathways to Rural and Remote Orientation Training a Primary Health Care approach

Course Summary

The purpose of the PaRROT Child Health Check Training is to

- Provide orientation and training to support the implementation of the Child Health Checks
- Support a primary health care approach to child health
- Support the building of rural and remote workforce capacity for child health screening

Scope

The PaRROT Child Health Check training course provides orientation and training for the multicultural, multidisciplinary primary health care team in chronic disease prevention, detection and management using a comprehensive primary health care framework

Content

The PaRROT Child Health Check course

- Introduces the Child Health Check section of the Chronic Disease Guidelines.
- Provides information on the background for each section of the check.
- Provides practical information on how to do the checks.

The Child Health Check course consists of 13 sessions (see table) and takes approximately 10 hours to complete. Participants can choose to do any or all of the sessions, depending on their interest and learning needs. A certificate is provided at the end of each session and includes the average time taken for each session.
