The Happy Teeth program is based on sound principles of effective learning and teaching. The program enables early childhood facilities to create healthier, safer and more supportive environments. Children learn to take more responsibility for oral health and hygiene and the result is happier teeth in child care and at home.

Parent/carer involvement fosters children’s sense of belonging and improves communication between the staff and the parent/carer and between the parent/carer and the child. It also helps to reinforce correct oral hygiene behaviours both in the facility and at home. Most importantly, Happy Teeth is lots of fun for everyone involved. Best of luck with Happy Teeth in your facility!
