Ethiopian Australians

- Ethiopia is located in the horn of Africa, a region that has experienced decades of natural disasters, political unrest, war, drought and famine. This has forced millions of Ethiopians to seek refuge within their own and in other countries.

- In the 1970s, drought, the Ogaden War with Somalia and an oppressive military regime caused the displacement of more than one million Ethiopians. In the 1980s, Ethiopia experienced another prolonged drought and a consequent famine that continued into the 1990s displacing hundreds of thousands of people.

- From 1998-2000, Ethiopia and Eritrea fought a war that killed more than 70,000 people and displaced more than 600,000 people from areas near the border.

- Ethiopia has itself provided refuge to displaced people from Sudan, Somalia and Eritrea who have fled war and famine in their own countries.

- At the time of the 2001 Census, there were 3600 Ethiopia-born people in Australia. By the 2006 Census this number had increased to 5640; an increase of 56.7 per cent. Between 2006 and 2010, more than 3000 Ethiopian refugees arrived in Australia.

- Ethnicity: Ethiopia is an ethnically complex and diverse country comprising more than 78 distinct ethnic groups. The seven largest ethnic groups are:
  - Oromo – 34.5 per cent
  - Amhara – 26.9 per cent
  - Somali – 6.2 per cent
  - Tigraway – 6.1 per cent
  - Other ethnic groups make up the remaining 17.5 per cent of the population.

Population of Ethiopia-born people in Queensland: 435
Population of Ethiopia-born people in Brisbane: 325
Gender ratio (Queensland): 95.9 females per 100 males
Median age (Australia): The median age of Ethiopia-born people in 2006 was 33.8 years compared with 46.8 years for all overseas born and 37.1 for the total Australian population.

- Sidama – 4 per cent
- Guragie – 2.5 per cent
- Welaita – 2.3 per cent.

Community Profiles for Health Care Providers
Community Profiles for Health Care Providers

- **Language**: Consistent with the diversity of ethnicities, there are more than 84 languages spoken in Ethiopia. Amharic (Amarigna) is the official language of Ethiopia and is spoken by 32.7 per cent of the population. Oromigna, an official regional language, is spoken by 31.6 per cent of the population. Other major languages of Ethiopia include:
  - Tigrinya (a second official regional language) – 6.1 per cent
  - Somaligna – 6 per cent
  - Guaragigna – 3.5 per cent
  - Sidamigna – 3.5 per cent
  - Hadiyigna – 1.7 per cent
  - English and Arabic are also official languages spoken by a small percentage of Ethiopians.

- **Religion**:
  - Ethiopian Orthodox: About 43.5 per cent of the population identify with this unique Coptic form of Christianity which has been practiced in Ethiopia since the fourth century AD.
  - Muslim: 33.9 per cent of the population are Muslim.
  - Protestant: 18.6 per cent of the population are protestant.
  - Traditional beliefs: 2.6 per cent retain traditional beliefs.

Ancestry, language and religion in Australia (2006 Census for Ethiopia-born)

- The top three ancestry responses of Ethiopia-born people in Australia were:
  - Ethiopian – 58.9 per cent
  - Not Stated – 8.9 per cent
  - Oromo – 5.5 per cent.

- From 2006 to 2010, 20.9 per cent of Ethiopia-born people settling in Australia identified themselves as Oromo and 13 per cent identified as Amhara.

- The main languages spoken at home by Ethiopia-born people in Australia were:
  - Amharic – 38.8 per cent
  - English – 14.8 per cent
  - Oromo – 12.2 per cent
  - Tigrinya – 8.3 per cent.

- The main religions of Ethiopia-born people in Australia were:
  - Islam – 22.2 per cent
  - Oriental Orthodox (Christian) – 21.9 per cent
  - Eastern Orthodox (Christian) – 21.6 per cent
  - Catholic – 6.7 per cent.

**Communication**

- Ethiopians may be uncomfortable with interpreters because of ethnic and political differences. As a result they may not openly express all of their health needs or trust prescribed medicines.

- Ethiopians generally prefer interpreters of the same gender.

- Many Ethiopian Australians may be unfamiliar with the use of a surname. Most people have their own personal name and use their father’s name in place of a surname. As a result, members of the same family may not have the same surname.

- Ethiopians are generally formal and courteous in their greetings. The most common form of greeting is a handshake with direct eye contact. Handshakes are generally light. Ethiopians usually address others by their title and first name.

- Elders are highly respected in Ethiopia and it is customary for Ethiopians to greet elders first and to bow when introduced to someone who is older or holds a more senior position.
Health in Australia

- Average life expectancy in Ethiopia is 55.8 years (male 53.3, female 58.4) compared to 81.7 years for all people in Australia (male 79.3, female 84.3)\(^6\).

- In a study of common medical conditions diagnosed in newly arrived African refugees in Melbourne, the major health issues included lack of immunity to common vaccine-preventable diseases, vitamin D deficiency or insufficiency, infectious diseases (gastrointestinal infections, schistosomiasis and latent tuberculosis), and dental disease\(^13\). Musculoskeletal and psychological problems were common in adults\(^13\).

- A 2003-2004 Western Australian infectious disease screening study of 2111 refugees and humanitarian entrants reported a high prevalence of infectious diseases in sub-Saharan Africans including:
  - Hepatitis B – 6.4 per cent carrier state, 56.7 per cent exposed
  - Syphilis – 6.8 per cent
  - Malaria – 8 per cent
  - Intestinal infections (giardia intestinalis – 13 per cent, schistosoma mansoni – 7 per cent, hookworm – 5 per cent, hymenolepis nana – 3 per cent, Strongyloides stercoralis – 2 per cent, salmonella – 1 per cent)
  - A Mantoux\(^{13}\) test result requiring tuberculosis treatment – 28.9 per cent\(^14\).

Health beliefs and practices

- Many Ethiopians practice herbal and traditional health remedies. However, the practice is limited in Australia due to a lack of availability of herbs and a lack of traditional healers and other specialists to prepare remedies and treat patients\(^15\). Some Ethiopian Australians may use traditional remedies in combination with Australian medical treatments, for related or unrelated health conditions, without informing their doctor\(^6,77\).

- Female genital mutilation (FGM) is practiced in Ethiopia\(^15\). Complications of FGM may include incontinence, obstructed miscarriage and childbirth, vaginal and perineal damage at childbirth, and sexual difficulties including non-consummation and painful intercourse\(^19\). Some families may want their daughters to undergo FGM, even if this means undertaking the operation outside Australia\(^9\). FGM is illegal in Queensland and all Queensland Health employees are obligated to report FGM, or the risk of FGM, to the Department of Communities (Child Safety). It is also illegal to remove a child from Queensland with the intention of having FGM performed.

- In Ethiopia, children commonly undergo uvulectomy (to prevent suffocation during pharyngitis in babies), the extraction of lower incisors (to prevent diarrhea), and the incision of eyelids (to prevent or cure conjunctivitis) are common\(^15\).

- Many Ethiopia-born people chew khat, a plant that contains an amphetamine-like stimulant that can produce mild to moderate psychological dependence and has been classified by the World Health Organisation (WHO) as a drug of abuse\(^20\). Khat is available and is not illegal in Australia\(^20\).

- The use of prayer for spiritual healing is an important part of treatment for illness for many Ethiopians\(^9,17\).

- Ethiopians may prefer injections to tablets\(^35\).

- In Ethiopia, bad news such as a terminal prognosis is first given to the patient’s family or close friends and not directly to the patient themselves. This is done to maintain the patient’s hope and avoid sudden shock that is seen as harmful to health\(^{15,21}\). A family member or close friend will inform the patient in a culturally appropriate manner\(^21\).
Social determinants of health

- The overall literacy rate in Ethiopia is low, especially among women. In 2003, the literacy rate was 42.7 per cent for the total population (50.3 per cent for men and 35.1 per cent for women).

- Prior to seeking refuge, many Ethiopian Australians experienced persecution, harassment, torture, political imprisonment, death or disappearance of family members, threats to safety, lack of freedom of expression and will, and coercion to support the ruling political regime.

- Proficiency in English (2006 Census):
  - 90 per cent of Ethiopia-born men and 78 per cent of Ethiopia-born women reported that they spoke English well or very well
  - 10 per cent of men and 18 per cent of women reported that they did not speak English well
  - Less than one per cent of men and four per cent of women reported that they did not speak English at all.

- At the time of the 2006 census, 48.8 per cent of Ethiopia-born Australians aged 15 years and older had some form of higher non-school qualifications compared to 52.5 per cent for the total Australian population.

- The participation rate in the workforce (2006 Census) was 59.4 per cent and the unemployment rate was 13.7 per cent compared to the corresponding rates of 64.6 per cent and 5.2 per cent in the total Australian population. The median weekly income for Ethiopia-born people in Australia aged 15 and older was $342 compared to $466 for the total Australian population.

Utilisation of health services in Australia

- The use of hospital services among people born in refugee-source countries, including Ethiopia, is lower or similar to that of the Australia-born population.

- A small study of sub-Saharan refugees in Sydney showed evidence of difficulties in accessing health care, including at times when a family member was sick. Barriers to health care access included language barriers, lower levels of education and literacy, financial disadvantage, lack of health information, not knowing where to seek help, and poor understanding of how to access health services.

- Overseas studies have shown that Ethiopian refugees use fewer mental health care services from health care professionals than the general population and are more likely to consult traditional healers for mental health problems.
