

CSCF Fact sheet 4 – Outline of current service levels

The Clinical Services Capability Framework (CSCF) for public and licensed private health facilities is a complex but intentionally comprehensive document outlining minimum requirements for the safe provision of health services in Queensland public and licenced private health facilities. It has been organised in modular format. Table 1 summarises the clinical services by capability level outlined in the CSCF.

The Fundamentals of the framework underpin the CSCF. It contains information common to all modules as well as a glossary defining terminology contextualised for the CSCF, with the purpose of these important references being to ensure terminology used in the CSCF modules is interpreted correctly. The Fundamentals of the framework must be read and understood with the corresponding module/s.
