Introduction

The Business Planning Framework: a tool for nursing and midwifery workload management 5th Edition (BPF 5th Edition) is the industrially mandated tool to support business planning for the purpose of managing nursing and midwifery resources and workloads in public sector health facilities. The principles of the BPF 5th Edition apply to all rural, rural, regional and metropolitan nursing and midwifery services in Queensland Health. This addendum is designed to recognise the unique challenges for nurses and midwives working in rural settings and must be used in conjunction with the BPF 5th Edition.

The Rural Setting Addendum was developed to meet the commitment between Queensland Health (QH) and the Queensland Nurses and Midwives’ Union (QNMU) under the provisions of the Nurses and Midwives (Queensland Health and Department of Education and Training) Certified Agreement (EB9) 2016. The agreement identified the need to further contextualise the BPF 5th Edition for a range of settings, including rural, to support compliance with the Nursing and Midwifery Workload Management Standard.

The Rural Setting Addendum was created by a statewide rural nursing and midwifery Specialty User Group in partnership with QNMU and the Department of Health. This addendum will assist nursing and midwifery staff within rural settings to:

- determine and manage the unique circumstances within their service that require special consideration when applying the principles of the BPF 5th Edition
- articulate productive (direct and indirect) nursing and midwifery activity within their service
- understand the current and emerging demand considerations for nursing and midwifery hours within their setting
- develop planning tables identifying productive and non-productive hours relevant to rural settings
- identify and describe client and service complexity and activity indicators to improve consistency in the application of the BPF 5th Edition in rural settings
Module 1: Development of a service profile

This section relates to BPF 5th Edition module 1: pages 13-26

Business planning in the context of rural settings

There are a number of common nursing and midwifery workload management and workforce planning issues within rural health settings. These are recognised nationwide as critical areas of concern. The most frequently discussed issues involve:

- articulating rural nursing and midwifery work
- validating indirect rural nursing and midwifery hours
- applying standard business planning definitions to rural settings and;
- accessing suitable rural data collections and reporting systems

These issues have also been validated through the statewide Business Planning Framework Generic Review 2017.

The unique challenges of rural communities compound the challenges of describing rural nursing and midwifery work. Population numbers often vary with transient groups, temporary employment models (such as fly-in fly-out), major tourist events, caravanning groups and mining industry and create short to medium term service demand. These fluctuations have implications on nursing and midwifery staff that are difficult to resource in a timely manner.

The increasing rates of socioeconomic disadvantage in rural areas and resulting effects on health, as well as the increased prevalence of mental health and chronic disease, all impact on the complexity and demand on services 1.

The geographical isolation of rural services results in unique differences to practice. Nursing and midwifery practice in rural settings often requires a generalist approach as there is wide variability in service delivery, dependent upon the needs of the community.

It is often the case in rural Queensland that there is limited on-site access to allied health, primary health, and specialist services, other than through visiting services, whereby such services are available for a few days a month, or on an ad hoc basis. The lack of preventative and primary health care impacts on the health outcomes of rural residents as well as the workload of the nurses and midwives providing services.

There are a broad range of service activity types at level 1-4 Clinical Services Capability Framework (CSCF) in rural settings 2.

The CSCF determines the level of service to be provided based on the minimum capability criteria, resulting in high frequency

---

1 http://ruralhealth.org.au/publications
of patient transfers and retrievals. Typically, the Director of Nursing / Facility Manager (DON/FM) undertakes this activity and as such, the true resourcing implications are not demonstrated. Accurate recording of escort activity in calculating nursing and midwifery resources is required.

The application of Nursing Hours Per Patient Day (NHPPD) or Nursing Hours Per Occasion of Service (NHPOS) or Nursing Hours Per Unit of Activity (NHPUA) does not provide an adequate representation of the full scope of activity and/or acuity demands upon nursing and midwifery within the rural health setting. The calculation of productive hours needs to incorporate staffing requirements across all service types recognising the need for nurses and midwives in rural settings to undertake roles that would be otherwise staffed in regional and metropolitan facilities. This further emphasises the need to draw on/rely on the professional judgement of the uniquely placed nurses and midwives undertaking the work in the calculation of the nursing and midwifery hours required. The following are key considerations in a rural setting:

- **Benchmarking**
  - Benchmarking of service activity and relative performance measures within rural health facilities is complex and affected by limited or absent clinical information systems or mismatched performance reporting frameworks
  - Benchmarking can also be challenging within rural health facilities due to the varied models of care for similar demographic and service characteristics and geographically located communities (i.e. Multipurpose Health Service (MPHS) vs. acute hospital model)

- **Infrastructure**
  - Ageing building infrastructure and building design impacts upon workflow efficiency, occupational health and safety and security of staff
  - Insufficient technology infrastructure (mobile network coverage, unreliable internet coverage, no Wi-Fi in health facilities)
  - Limited or absent clinical information systems impacting recording of activity and subsequent data reliability. This includes quantitative methods to individually measure nursing and midwifery workloads
  - Workload metrics that are in place are focused on general staff workload (incorporating all health providers), patient activity and procedures undertaken and therefore do not accurately capture all the productive contributions of nursing and midwifery staff
  - Inflexible funding models
    - block funding may not reflect the broad range of service activity types undertaken and growing complexity/acyt
    - introduction of services traditionally performed within ABF facilities
    - Calculations based on number of episodes, with limited consideration of patient acuity, leading to poorly articulated nursing and midwifery demands

- **Impact of changes in acuity and complexity of care**
  - Changing acuity of health services (delivering higher complexity healthcare such as renal dialysis and chemotherapy in rural health settings)
  - Significant rural midwifery workforce resourcing implications exist in association with implementation of National Maternity Services Plan 2010 \(^3\) and the changing consumer expectations for evidence based continuity of care midwifery models in rural communities
  - Capacity and capability of the nursing and midwifery workforce to respond to these changes and maintenance of

Role of the Rural DON/FM

- The Rural DON/FM role has a substantially broad health service management function (both operational and strategic) inclusive of inter-professional leadership, management and workforce planning.

- The DON/FM in rural hospitals, community hospitals, Multi-Purpose Health Services (MPHS) and Primary Health Centres (PHC) additionally provide the middle management support creating indirect activity demands. In other facilities, this middle management support would normally be provided by Nurse Unit Manager (NUM)/Midwife Unit Manager (MUM) positions.

- The DON/FM provides direct clinical care and participates in on call arrangements; consideration to fatigue should be made.

- The DON/FM provides direct and indirect hours; which requires consideration when calculating workload demands.

  - The DON/FM is also responsible for operational and strategic planning, building, equipment and asset maintenance, fleet car management, management of food safety, hotel services management, emergency management planning, radiation safety audits, community engagement, consultative forums, accommodation management.

Recruitment, retention and succession planning

- The vast distances between communities and services, small local populations with diverse health needs, and comparatively small health workforce in any location adds complexities that need to be factored into managing the workforce.

- Limited opportunities for undergraduate nursing and midwifery students to have clinical placements in the rural setting have implications on the attraction of the future workforce.

- Graduates are fundamental in succession planning; however adequate education infrastructure must accompany growing graduate numbers, particularly in facilities with low numbers of total workforce full-time equivalent (FTE).

- Support models such as Telehealth Emergency Management Support Unit (TEMSU) and rural or mobile (multi-site) Clinical Facilitators require resourcing consideration.

- Workforce maldistribution results in role substitution and expanding role functions within nursing and midwifery.

- There is limited access to a casual workforce for the management of emergent leave and short term planned leave.

- This can be due to Professional Development Leave (PDL)/mandatory training and role specific training requirements that are not held locally and travel is required.

The BPF 5th Edition outlines the general factors a service should consider when analysing the internal and external environment as part of developing their service profile. However, there are a variety of business planning factors which influence the rural setting and result in service demand fluctuations. These internal and external factors need to be considered when analysing service demand. Wards and services should annually assess the impact of each factor on their environment and make the necessary adjustments to the allocation of nursing and midwifery hours.

Table 1 provides examples of several business planning considerations relevant to the rural setting, based on recognised internal and external influences. Consideration of the impact and level of influence these have on nursing and midwifery workloads to support the productive hours is required.
### Table 1: Business planning consideration for rural settings

<table>
<thead>
<tr>
<th>Influences (internal and external)</th>
<th>Service impact</th>
<th>Examples of workload management considerations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Locality of service</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Metropolitan, regional, rural and remote</td>
<td>The locality, type and catchment area of a service will influence the balance of service demand and supply. Examples: Rural health services need to consider the workload impacts of delivering a broad range of health services in geographically isolated and dispersed communities.</td>
<td><strong>Direct nursing and midwifery hours:</strong> Calculation of clinical hours for direct care, allocation of clinical hours (rosters), selection of service activity/acuity measures, use of minimum safe staffing requirements</td>
</tr>
<tr>
<td><strong>Type of service</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e.g. emergency, primary health clinic, operating theatre</td>
<td>This means that a large component of travel associated time needs to be factored into resourcing the service demand activity. Role substitution and role expansion has resulted in a proportion of workload is comprised of non-nursing duties, such as ambulance, pharmacy, pathology, x-ray, meal preparation/hotel services and mortuary services as examples. This needs to be considered within the context of practice impacts workload management.</td>
<td><strong>Indirect nursing and midwifery hours:</strong> Calculation of clinical hours for indirect care, travel, program/service based education, succession planning, quality activities and research</td>
</tr>
<tr>
<td><strong>Catchment area</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Local Hospital and Health Services versus Statewide Services</td>
<td>The model of care selected for a service will influence the nursing/midwifery and support structures required. Nursing and midwifery roles and how they relate with other clinical roles will impact on the balance of service demand and supply. Examples: In rural health care, nursing and midwifery roles can be categorised by the skills required to meet client demand (i.e. orthopaedic, maternity, mental health, endocrine, renal). To accommodate the wide range of skills required, a level of flexibility in role description is necessary which can impact on the number of nursing and midwifery staff employed and their workloads.</td>
<td><strong>Direct nursing and midwifery hours:</strong> Calculation of clinical hours for direct care provided in and outside the service, position classifications for the clinical hours required, allocation of clinical hours (rosters), selection of optimal service activity/acuity measures, safe staffing levels.</td>
</tr>
<tr>
<td><strong>Nursing and midwifery structure</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Roles, functions, accountabilities and relationships between all categories of nursing and midwifery staff</td>
<td>The accessibility and level of support available to and from other services may vary. Nursing and midwifery services should account for the productive hours required to manage the demand from these interactions.</td>
<td><strong>Indirect nursing and midwifery hours:</strong> Calculation of clinical hours for non-direct care networking/collaboration (internal and external) travel, staff training, professional development, quality activities and research.</td>
</tr>
<tr>
<td><strong>Support structure</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Providing support to other services and/or receiving support from other services</td>
<td></td>
<td><strong>Workforce planning:</strong> Development of role descriptions and skill mix profiles suitable for the context of practice (internal and external) to the service. Devising operational and organisational structures to support staff in applying the chosen model of care. Development of operational workforce plans to inform FTE requirements and macro workforce planning formulas.</td>
</tr>
<tr>
<td><strong>Model of care</strong> (internal)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Multi-functional teams</td>
<td>Within rural communities, access/support from other services may be limited. Nurses/midwives within these environments may be required to practice autonomously at an advanced level. The classification of positions within these communities will reflect this requirement. The accessibility and level of support available to and from other services may vary. Nursing and midwifery services should account for the productive hours required to manage the demand from these interactions.</td>
<td></td>

</table>
| **Policy/legal factors** (External) | Changes in health policy and legislation will influence service delivery and staff requirements. Common change drivers include governments (commonwealth/state), licensing organisations, professional and industrial groups.  
Examples:  
Commonwealth - health reform  
Queensland Health – strategic plan | **Direct nursing and midwifery hours:** Calculation of clinical hours for direct care (based on available funding), position classifications for the clinical hours required, registration commitments for clinical hours, allocation of clinical hours (rosters), selection of optimal service activity/acyuity measures, and use of minimum staffing requirements. |
| **Economic factors** (External) | Funding policies, the national economy and the interface between public and private health care providers will influence the delivery of rural health services and the number of staff required.  
Examples:  
Service improvement initiatives can provide non-recurrent funding increases for services which achieve the targeted results. These incentives could impact the skill and number of nurses/midwives required for service delivery. | **Indirect nursing and midwifery hours:** Calculation of hours for indirect and non-productive activities such as policy development, business planning, service interfaces, travel, staff training, professional development, quality activities and research. |
| **Social/population factors** (External) | Population demographics and community expectations will impact on the types of remote health services offered, how the services are offered, staffing numbers and skill mix required for service delivery.  
Examples:  
Delivering health services to a community with a high proportion of non-English speaking people will impact the number and type of clinical hours required to operate the service. | **Workforce planning:** Development of role descriptions and skill mix profiles suitable for the context of practice (internal and external) to the service. Devising operational and organisational structures to support staff in applying the chosen model of care. Development of operational workforce plans to inform FTE requirements and macro workforce planning formulas. |
Nursing and midwifery core demand considerations

To improve the consistency and transparency in the application of the BPF 5th Edition, specific demands on direct and indirect nursing and midwifery hours in the rural setting have been categorised to assist in articulating nursing and midwifery work. The categories are based on the most common and frequent demands placed on nurses and midwives within the rural setting. The following section will explore the relationships between core demand considerations and the context of practice in rural settings.

Client/service complexity

When reviewing client and/or service complexity there are a number of unique considerations for the rural setting, these include:

- Higher rates of ill health, increased risk factors, morbidity for defined diseases
- Impact of environmental issues, such as physically dangerous occupations and factors related to driving (for example: long distances, greater speed, isolation, animals on roads)
- Higher rates of harmful or hazardous use of cigarette and alcohol consumption, compared to metropolitan areas
- Differences in access to services resulting in higher death rates, for example from coronary heart disease and motor vehicle accidents
- Higher population rates of Aboriginal or Torres Strait Islander in rural areas with associated poorer health outcomes. An added complexity in providing continuity of care is the transient nature of the Indigenous population.

Australian Indigenous Health InfoNet provides comprehensive data on these outcomes, including:

- Babies born to Aboriginal and Torres Strait Islander women are almost twice as likely to die in their first year as those born to non-Indigenous women
- Around one-in-eight (13%) Aboriginal and Torres Strait Islander people reported having some form of cardio-vascular disease
- Diabetes affects 13% of Aboriginal and Torres Strait Islander adults
- Aboriginal and Torres Strait Islander people were five times more likely than non-Indigenous people to be admitted into hospital for COPD, three times more likely to be admitted for influenza and pneumonia and nearly twice as likely to be admitted for asthma
- 34% of Aboriginal and Torres Strait Islander children aged 4-14 years reported having tooth or gum problems

- Allied health, primary health and specialist services may only be available from visiting services, provided largely on an ad hoc basis. This limited access to preventative and primary health care impacts greatly on the health outcomes of rural residents and the nursing and midwifery workload demand.

- The dispersed population in rural areas requires investigation and consideration in the resourcing and provision of services

The fluctuation of the population with seasonal visitors such as ‘grey nomads’ who are typically retirees with added health complexities as well as the fly-In fly-Out workforce which can change the population by thousands impacting on nursing and midwifery demand.

The Index of Relative Socio-Economic Disadvantage ranks geographical areas in terms of their relative socio-economic disadvantage. This information is key in rural settings and is important to review when assessing complexity of service delivery 11.

Model of care/service delivery

The rural setting does not have the opportunities for economies of scale which are available in larger facilities; therefore models of care and/or nursing and midwifery roles may require flexibility to meet demand. Some examples of this are:

• facility management is often undertaken by the DON role
• nurses and midwives may assume additional non-clinical roles when working in isolation, such as maintenance coordination, ambulance service provision, pharmacy and pathology collection
• isolated practice and associated safety considerations
• nurses practicing in an advanced scope of Rural and Isolated Practice Registered Nurse (RIPRN) endorsement

These are all impacted by the geographic isolation, problematic transport, poor infrastructure (including internet/phone services), as well as harsh extremes of climate and high turnover of workforce.

Services must reflect and have the capability to meet the minimum criteria as determined by the CSCF 12.

Technology and materials management

The introduction of systems and eHealth technology requires significant input from nurses and midwives. Often there is no or limited on-site IT support in rural facilities, resulting in the staff needing to assist other streams in using the systems (for example, medical officers and locums who rotate through the service).

The time spent on accessing and recording of information on a number of systems needs to be considered, particularly the impact of the unstable internet connectivity. Nursing and midwifery staff should build indirect time to account for training and ongoing systems management.

Community interface

There are a variety of service delivery models within the rural setting that provide care to consumers across primary care and inpatient units. In most cases, the individual models inter-relate and generate demand on productive hours within the connecting services. The unit or department may directly and/or indirectly interact with the following service areas:

- community engagement through Community Advisory Networks (CAN) and local service coordination with Non-Government Organisations (NGOs)
- Aboriginal Community Controlled Health Services (ACCHS)
- primary health care providers
- private sector service providers
- community health service providers
- acute inpatient and extend inpatient services
- community residential care providers
- specialised statewide services such as mental health and paediatrics services

The time staff commit to these activities needs to be considered. When calculating the productive nursing and midwifery hours for the service, include quantitative and qualitative information regarding community interface activities.

Quality and safety

Quality and safety activities within rural health services are primarily governed by organisational policy and legislation. The productive nursing and midwifery hours of the health service are influenced by quality and safety processes. The distribution of direct and indirect hours need to be contextualised for the health service based on variables such as type of service delivered, staff competency required, and location of unit or program.

Some key quality and safety components which may impact productive nursing and midwifery hours include:

- client safety
- staff safety
- mandatory/requisite training requirements
- policy development and review
- portfolios
- incident and near miss reporting and management.

As this is not an exhaustive list, a review of your local activities and local incident reporting process is recommended.

Education and service capacity development

The CSCF identifies training recommendations/requirements for nurses and midwives. As part of the service profile, consideration should be given to the CSCF modules that are relevant for the particular rural service for establishing education and requisite training requirements including associated travel time.
Leadership and management

In a rural setting, leadership and management organisational structures are often flatter than larger organisations. This may impact the level of demand placed on productive nursing and midwifery hours. Leadership and management roles are closely linked with local service delivery model. The demand considerations include:

• skill requirements of leaders and managers
• service accountabilities and responsibilities
• human resource management (for example recruitment, succession planning, business planning)
• organisational involvement (including committees, networking)
• organisational culture
• staffing profile (including classification, scope of practice, training and skills)
• interactions with multidisciplinary team members

The multiple responsibilities that the rural DON undertakes requires additional consideration when developing direct, indirect and non-productive hours. These include:

• on call allocations
• direct clinical care expectations
• facility management activities

Research and evidence based practice

Undertaking research and evidence based practice activities will influence the number of indirect nursing and midwifery hours required for service delivery. Research and evidence based practice is essential to improve the standards of care that will produce better health outcomes for clients.
There are a number of legislative and policy requirements that influence the rural setting. These should all be considered when developing service profile, resource allocation and evaluation of performance.

- **Health policy** - Advancing rural and remote health service delivery through workforce: A strategy for Queensland 2017-2020

- **Primary Clinical Care Manual (PCCM)** - guides practice including assessment and management of a range of clinical conditions and presentations. Also provides a Drug Therapy Protocol (DTP) for specified clinical situations and endorsement/authorisations

- **Chronic Conditions Manual** - collection of guides produced from contemporary evidenced literature and developed using best practice frameworks

- **Strategic plans:**
  - National Maternity Services Plan 2010. Five year vision that “all Australian women will have access to high-quality, evidence-based, culturally competent maternity care in a range of settings close to where they live”
  - Implementation plan for the National Aboriginal and Torres Strait Islander Health Plan 2013 – 2023

- **Health legislation:**
  - Nursing and Midwifery Board of Australia (NMBA) Endorsement for scheduled medicines for registered nurses (rural and isolated practice). This standard sets out the qualifications and other requirements that must be met in order for a registered nurse or applicant for registration as a nurse to be granted an endorsement under section 94 of the National Law as qualified to obtain, supply, and administer scheduled medicines.
  - Health Act 1937, Health (Drugs and Poisons) Regulation 1996. Detail about registered nurses in regard to isolated practice and supply of controlled drugs on discharge from hospital.
**Module 2: Resource allocation**

This section relates to BPF 5th Edition Module 2: pages 27-47

Establishing total nursing and midwifery resource requirements

<table>
<thead>
<tr>
<th>STEP 1</th>
<th>Calculate total annual productive nursing and/or midwifery hours required to deliver service.</th>
<th>Go to BPF 5th Edition page 31</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>STEP 5</td>
<td>Convert non-productive nursing and/or midwifery hours into full-time equivalents.</td>
<td>Go to BPF 5th Edition page 43</td>
</tr>
<tr>
<td>STEP 6</td>
<td>Add productive and non-productive full-time equivalents together and convert into financial resources in partnership with business team.</td>
<td>Go to BPF 5th Edition page 44</td>
</tr>
<tr>
<td>STEP 7</td>
<td>Allocate nursing and/or midwifery hours to meet service requirements.</td>
<td>Go to BPF 5th Edition page 47</td>
</tr>
</tbody>
</table>
Productive nursing and midwifery hours include both direct and indirect clinical hours. Calculating the number of productive hours required for a rural setting is the first step in managing nursing and midwifery workloads and establishing the total operating nursing and midwifery budget, specifically identifying the FTE required.

Creating a list of standard direct and indirect nursing and midwifery activities in your unit or practice area will assist in articulating and monitoring the use of productive hours. As outlined in the BPF 5th Edition, this consultation process should be undertaken with unit staff.

Information gathered about productive hours can be used to inform a number of service requirements such as staffing numbers, skill mix, models of care and education/training programs. It is important to document all nursing and midwifery activities relevant to your service, especially those considered unique to your unit or practice area. Defining productive hours increases the understanding of the nursing and midwifery work being performed and provides an excellent foundation when developing a service profile.

Table 2 provides examples of key productive and non-productive nursing and midwifery activities for a rural setting and should be used in conjunction with the BPF 5th Edition (pages 27-47).

Total productive hours =
\[
\text{direct hours} + \text{indirect hours}
\]

Please note: Education and training programs provided within the clinical service/program/facility are considered indirect hours. Clinical hours associated with mandatory training and professional development leave for education purposes is allocated within non-productive hours.
Service activity

The professional judgement of nursing/midwifery staff informs the minimum skill mix required to build a staffing roster to meet the demand created by the model/s of care.

Financial activity does not always easily or directly translate into nursing and midwifery activity. In the rural setting, the roles of nurses and midwives span emergency, outpatient, pharmacy, inpatient and dialysis services, so the time taken as hours or fractions of hours reflecting these multiple activities must be considered.

For example in the rural setting nurses and midwives are providing:

- **Pharmacy services**: One Occasion of Service (OOS) in pharmacy can mean that the patient has had one script dispensed, or it can mean the patient has had 12 scripts dispensed. In this example, there are vastly different nursing and midwifery times required to deliver each activity. Further consideration should be given when the service is provided as part of the continuity of care in the primary health setting as opposed to services or facilities that directly roster nurses to pharmacy activities.

- **Pathology services**: In a metropolitan facility, nurses and midwives involvement in pathology may be limited to collection of blood from the patient. However, in a rural facility, the nurses and midwives involvement may include collection, centrifuging and storage of the blood. Additional responsibilities include packaging and transporting the blood to the airport or another facility for processing. These activities are equal in their financial weighting, but require vastly different amounts of nursing and midwifery time. Additional training is required for rural nurses and midwives undertaking packaging and transport of pathology specimens.
• **Medical imaging (X-ray):** Nurses and midwives undertake X-ray tasks. OOS can vary in complexity, for example, one OOS can mean over 10 separate exposures resulting in much more nursing and midwifery time dedicated to the activity. The indirect hours associated with maintenance, file management, legislated reporting and associated compliance reports for medical imaging should be considered. The associated time to become a licensed X-Ray Operator must also be considered for services where nurses and midwives deliver this activity.

• **Ambulance services:** Hospital based ambulance services are provided by nurses in rural settings. When developing the nursing hours required, the need for backfill and on call implications must be considered. It is important to note that the rural setting can require travel across extensive distances which impacts on the nursing hours required for backfill and to manage fatigue. Additional training is also required to deliver this service.

• **Outpatient services:** Outpatient clinics are often provided on an outreach basis. The clinic providers include nursing and midwifery staff, medical staff, allied health or other NGOs (e.g. Primary Health Network contractors) attending from out of the local area. This requires additional time to prepare the clinics. Nurse and midwife-led clinics are often provided by staff undertaking other clinical responsibilities. Examples of specialist nurse and midwife-led clinics include:
  » Nurse Navigator clinics
  » chronic disease clinics
  » wound clinics
  » school based clinics
  » immunisations
  » maternal health clinics
  » specialty clinics
  » domiciliary services
  » mental health clinics
  » sexual health clinics

Medical imaging (X-ray): Nurses and midwives undertake X-ray tasks, OOS can vary in complexity, for example, one OOS can mean over 10 separate exposures resulting in much more nursing and midwifery time dedicated to the activity. The indirect hours associated with maintenance, file management, legislated reporting and associated compliance reports for medical imaging should be considered. The associated time to become a licensed X-Ray Operator must also be considered for services where nurses and midwives deliver this activity.

Ambulance services: Hospital based ambulance services are provided by nurses in rural settings. When developing the nursing hours required, the need for backfill and on call implications must be considered. It is important to note that the rural setting can require travel across extensive distances which impacts on the nursing hours required for backfill and to manage fatigue. Additional training is also required to deliver this service.

Outpatient services: Outpatient clinics are often provided on an outreach basis. The clinic providers include nursing and midwifery staff, medical staff, allied health or other NGOs (e.g. Primary Health Network contractors) attending from out of the local area. This requires additional time to prepare the clinics. Nurse and midwife-led clinics are often provided by staff undertaking other clinical responsibilities. Examples of specialist nurse and midwife-led clinics include:
  » Nurse Navigator clinics
  » chronic disease clinics
  » wound clinics
  » school based clinics
  » immunisations
  » maternal health clinics
  » specialty clinics
  » domiciliary services
  » mental health clinics
  » sexual health clinics
• **Telehealth services:** Nurses and midwives are required to deliver and facilitate services via telehealth. The impact of this is that the nurse or midwife may be required to transport the patient to the hospital for their appointment. Alternatively they may provide tele-health in the patient’s home setting, which requires additional time to locate the patient, transport additional equipment and conduct the session.

• **Mortuary services:** Rural hospitals often provide the only morgue facility in their geographical area. Persons who are deceased within the community are transported to the hospital morgue. Care of the deceased person can be the responsibility of the nurses and midwives. Nursing and midwifery activity includes thermometer checks, maintenance of morgue, facilitating viewings of the deceased and assisting patient handling when the undertaker transports the deceased. This nursing and midwifery activity is not reflected in financial activity.

• **Non clinical activity:** Nurses and midwives often perform a large amount of non-clinical activities which need to be acknowledged when considering hours for service delivery. Some examples of additional non-clinical requirements are:
  » generator maintenance/checking
  » QFleet management
  » patient travel
  » procurement
  » scheduled and non-scheduled asset maintenance
  » clinical forms management
  » stores management
  » accommodation management
  » emergency planning management
  » management of waste
  » management of food safety requirements
  » management of environmental cleaning requirements
  » project management (such as refurbishments as BEMS not on site)
  » consumer engagement committees (e.g. CANs)

In the absence of a nursing and midwifery data set for rural settings, clinical discretion and professional judgment is exercised. Some examples of activity measures that are commonly used have been identified and listed in Appendix 1 under the following headings:

- emergency activity
- inpatient activity
- aged care activity
- outpatient activity
- hospital based ambulance activity
- primary health clinic activity
- mortuary activity
- telehealth activity
- CSSD activity
- non-clinical activity

The following is a table that provides an example of associating direct nursing and midwifery activity with hours in a service that combines multiple service delivery (for example outpatient and emergency). This table does not include inpatient activity. The times allocated are examples only and should be tailored to each specific site through collaboration with nursing and midwifery staff working in the service area.
Table 3: Example of multiple service delivery nursing and midwifery direct care activity (excluding inpatient)

Total nursing and midwifery hours for OOS activity

*note: QH data sets, including MAC data, are detailed in Table 4.
Module 3: Evaluation of performance

Data collection for rural settings

Data collection supports the measurement of financial outcomes and service performance and partially, workload demand. The available information systems may not always capture the data required for conducting a comprehensive environmental analysis of nursing and midwifery in the rural setting.

Table 4 outlines key identified information systems available in rural health service, they may not provide the required information so local data bases or spread sheets may be developed.
### Table 4: Rural Health Services Information Systems and Data Collections

<table>
<thead>
<tr>
<th>Information system/collection</th>
<th>Purpose</th>
<th>Informs</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monthly Activity Collection (MAC)</td>
<td>Collects aggregate (or summary level) data on ‘admitted’ and ‘non-admitted’ patient activity from public acute hospital facilities, public residential psychiatric hospitals and public nursing homes/hostels/independent living units and multipurpose health services each month. Data is routinely reported on QH’s internet and internet sites.</td>
<td>Activity, Provider type, Client type, Service type, Performance, Financial reporting</td>
</tr>
<tr>
<td><strong>Note:</strong> MAC reporting to become obsolete in 2018/19</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Outpatient Services Information Management System (OSIM)</td>
<td>Customer service focused system that assists clinicians to manage waiting times, administration processes, clinical statics and patient appointments.</td>
<td>Session type, Care type, Delivery setting, Clinic type, Service type, Service delivery, Activity, Referral/waitlist, Financial reporting</td>
</tr>
<tr>
<td>Hospital Based Corporate Information System (HBCIS)</td>
<td>QH’s enterprise patient administration system, capturing and managing both admitted and non admitted patient, clinical, administrative and financial data.</td>
<td>Activity, Workforce, Services, Performance, Client demographics, Referral/waitlist, Financial reporting</td>
</tr>
<tr>
<td>Queensland Hospital Admitted Patient Data Collection (QHAPDC)</td>
<td>The QHAPDC is the morbidity collection for all patients who have been admitted and separated from a hospital in Queensland. The information collected is used to manage, plan, Research and fund facilities at a local state and national level.</td>
<td>Activity, Client complexity, Client trends, Performance, Client outcomes, Funding</td>
</tr>
<tr>
<td>Enterprise Discharge Summary (EDS)</td>
<td>The EDS application uses information from a number of existing Queensland Health specialist systems to create a legible, consistent, electronic discharge summary. It allows the summary to be delivered electronically to general practices in a secure, timely and standardised format.</td>
<td>Client trends, Client complexity, Client outcomes, Performance</td>
</tr>
<tr>
<td>Primary Related Incident Management and Evaluation System (PRI(ME))</td>
<td>Management of clinical incidents and health care complaints.</td>
<td>Performance, Service safety, Client outcomes</td>
</tr>
<tr>
<td>RiskMan</td>
<td>RiskMan will provide the HHS with an integrated, web based system for the collection and management of the incidents, feedback, risks and case management.</td>
<td>Incident reporting</td>
</tr>
<tr>
<td>Decision Support System (DSS Panorama Necto)</td>
<td>Provides summary data reports displaying aggregate expenditure, budgets, variances and balances for cost centres and account codes for services. Reports are available for agency use, overtime, leave/absenteeism, position occupancy and work centres.</td>
<td>Workforce, Expenditure, Performance</td>
</tr>
<tr>
<td>Emergency Department Information System (EDIS)</td>
<td>Electric system for recording emergency department activity including presentation, triage category, length of stay, ICD and clinical notes etc.</td>
<td>Activity, Acuity, Client outcomes</td>
</tr>
</tbody>
</table>

Table continued overleaf »
Examples of workforce specific quality indicators in the rural setting include:

- vacancy rate
- staff turnover
- overtime used
- casual/agency hours usage
- workload assessments
- absenteeism
- requisite competency rate

Key performance indicators should be chosen based on the individual service, with consideration to the consumer, staff, and the greater organisation.

Measurement of performance should include quality indicators including results from accreditation cycles and periodic reviews, further examples can be seen on page 50 of the BPF 5th Edition.
Forecasting and benchmarking

In the rural setting, as there are no standardised data sets, benchmarking can prove challenging. In the absence of reliable benchmarking, the evaluation of performance can be used to inform forecasting in rural settings.

A key component of the BPF cycle is evaluating performance, this will assist in assessing results against the planning as well as form key information when commencing the next annual cycle, this is depicted in Figure 1.
Balancing supply and demand in nursing and midwifery services

This section relates to BPF 5th Edition Balancing Supply and Demand: page 55 and *The Nurses and Midwives (Queensland Health) Award - State 2015*, Clause 39
**Determine a ‘high workload’**

- Confer with DON/line manager/professional nursing and midwifery lead

**Consider alternative strategies**
- Prioritise activities required based on clinical need and ability of available staff
- Adapt pattern of work e.g. team nursing/midwifery or task allocation
- Skill mix alternatives e.g. roles for ENs or AINs to support prioritised activities
- Prioritisation of activity – implementation of escalation strategy/policy

**Decide if additional hours are required**

- Extra nursing/midwifery hours from
  - casual/pool
  - part-time extra shifts
  - agency
  - overtime
  - time off in lieu of overtime (TOIL)

- Coordinate and confer with nursing/midwifery team/line manager

**Causes:**
- Shortfall in roster for the clinical activity.
- Patient numbers are higher than number of funded beds.
- Patient acuity or staff skill mix does not allow for the appropriate level of supervision or support.

**Consider alternative strategies**
- Clinical prioritisation of patients/care recipients

**Re-evaluate throughout the shift.**
Will the shortfall resolve with the next shift or is it ongoing?

**Document** workload concern as per local process and forward to DON/line manager/nursing or midwifery professional lead, NaMCF as appropriate

**Feedback** to work unit

  - Weighted Activity Units (WAU)
  - patient transfers
- Aged care activity
  - Occupied Bed Days
  - complexity indicators (e.g. Aged Care Funding Instrument score, care package requirements)
- Outpatient activity
  - pharmacy activity (including scripts dispensed, webster packs, number of OOS)
  - X-ray activity
  - Pathology activity
  - renal dialysis numbers broken down to self-care or assisted
  - WAU
  - tier 2 clinic activity
  - visiting clinic support and coordination
- Hospital Based Ambulance Activity
  - number of call outs
  - number of out of hours call outs
  - number of patients treated
  - number of kilometres travelled on call out
  - complexity of patients called out
- Primary Health Clinic activity
  - school based clinic OOS or activity
  - community health screening activity
  - number of out of hours OOS
  - number of community health promotion days/attendees
- Mortuary activity
  - number of inpatient transfers
  - number of deceased community members cared for
- Telehealth activity
  - time spent in provider clinic
  - time spent in receiver clinic
- Central Sterilising Department activity
- Non-clinical activity
  - time spent undertaking maintenance
  - time spent undertaking procurement
  - time spent undertaking accommodation management
  - time spent undertaking food safety requirements
  - time spent undertaking additional projects (such as project management for refurbishments)
Acknowledgements

Queensland Health acknowledges the authors, reviewers and editors of the Business Planning Framework EB9 Addenda Project from which this document is derived.

This addendum was authored by Queensland Health, Office of the Chief Nursing and Midwifery Officer (OCNMO), and Queensland Nurses and Midwives Union (QNMU) by:

- Jillian Richardson, Specialty Practice Lead: Rural Setting Addendum
- Sandra Eckstein, Assistant Director of Nursing, OCNMO (co-lead)
- Tarryn Mullavey, Acting Assistant Director of Nursing, OCNMO (co-lead)
- Sharyn Hopkins, Professional Officer, QNMU (co-lead)

Queensland Health would also like to thank its nurses and midwives for contributing to this project and delivering excellent standards of evidence-based patient care to the people of Queensland.

Special acknowledgement is given to members of:

The Rural Setting Speciality Users Group –
- Jillian Richardson, Specialty Practice Lead: Rural Setting Addendum
- Tarryn Mullavey, Nursing Director – Service Planning, North West HHS
- Anita Bolton, DON/FM, Warwick Hospital, Darling Downs HHS
- Clair Nunn, BPF Resource Nurse, Central West HHS
- Yvonne Nugent, Clinical Nurse, West Moreton HHS
- Lesley Laffey, DON Cloncurry, North West
- Graeme Poole, NUM Atherton Hospital, CHHHS
- Lyndie Best, DON, Kilcoy Hospital, Metro North HHS
- Ann Aitken, DONM, Atherton Hospital, CHHHS
- Gillian Stanbrook, Nurse Practice Coordinator, Townsville HHS
- Deb O’Brien, DON, Gatton Hospital, West Moreton HHS
- Krystle Andrew, RN, Beaudesert Hospital, Metro South HHS
- Cheryl Steers, NUM, Wide Bay Rural Division
- Peter Le Griffon, DONM and FM, Mossman Hospital, CHHHS
- Wendy Fry, DONM and FM, Esk Hospital, West Moreton HHS

The BPF Strategic Addenda Project Team -
- Andrew Stevens, Principal Industrial Advisor, DOH
- Greg Moore, EB9 Project Manager, DOH
- Kylie Badke, Industrial Officer, QNMU
- Jillian Richardson Speciality Practice Lead: Rural Setting Addendum
- Denise Sticklen, Speciality Practice Lead: Correctional Services Addendum
- Debbie McCarthey, Speciality Practice Lead: Emergency Departments Addendum
- Colleen Glenn, Speciality Practice Lead: Maternity Services Addendum
- Desley Horn, Speciality Practice Lead: Paediatrics Addendum

The BPF Subject Matter Expert Reference Group - Glenn Hokin, Jane Davies, Jane Walker-Smith, Jeff Dippel, Jeffrey Souter, Juliet Graham, Lesley Reid, Lynne Cameron, Michelle Eley, Neil Pratt, Paolo La Penna, Rachelle Cooke, Rohan Harbert.

The EB9 Executive Directors of Nursing and Midwifery Services
- Chris Small, EDNM, South West HHS
- Veronica Casey, EDNM, Metro South HHS
- Judy Morton, EDNM, Townsville HHS
- Alanna Geary, EDNM, Metro North HHS

The statewide Executive Directors of Nursing and Midwifery Services.

Special acknowledgement is given to the following contributors:

- Shelley Nowlan, Chief Nursing and Midwifery Officer, OCNMO
- Diana Schmalkuche, Director of Nursing, Workforce Sustainability, OCNMO
- Rachel Borger, Director, Industrial Relations, Employment Arrangements Unit
- Jessica Gardner, Manager, Industrial Relations, Employment Arrangements Unit
- Susan Krimmer, Acting Assistant Director of Nursing, OCNMO for her contribution in co-leading and commencing the project.
