1 Introduction

This document is a supplement to *Non-urgent referral for antenatal care*. It provides supplementary information regarding development, makes summary recommendations, suggests measures to assist implementation and quality activities and summarises changes (if any) to the document since original publication. Refer to the operational framework for abbreviations, acronyms, flow charts and acknowledgements.

1.1 Funding

The development of this operational framework was funded by Healthcare Improvement Unit, Queensland Health. The general practitioner and consumer representatives were paid a standard fee. Other working party members participated on a voluntary basis.

1.2 Conflict of interest

No conflict of interest was identified.

1.3 Framework review

Queensland clinical guidelines and operational frameworks are reviewed every 5 years or earlier if significant new evidence emerges. Table 1 provides a summary of changes made to the document since original publication.

Table 1. Summary of change

<td>September 2011</td>
<td>MN11.28-V1-R16</td>
<td>First publication</td>
</tr>
<tr>
<td>July 2016</td>
<td>MN16.28-V3-R21</td>
<td>Content endorsed as current with minor amendments. Added Section 3.1 Use of telehealth services</td>
</tr>
</tbody>
</table>
2 Methodology

Queensland Clinical Guidelines (QCG) follows a rigorous process of guideline development. This process was endorsed by the Queensland Health Patient Safety and Quality Executive Committee in December 2009. The guidelines and operational documents are best described as ‘evidence informed consensus guidelines’ and draw from the evidence base of existing national and international guidelines and the expert opinion of the working party.

2.1 Topic identification

2.2 Scope

The scope of the operational framework was determined using the PICO Framework (Population, Intervention, Comparison, and Outcome) as outlined in Table 2.

Table 2. PICO Framework

<table>
<thead>
<tr>
<th>PICO framework</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Population</td>
<td>Pregnant women who need a referral to a higher level service</td>
</tr>
<tr>
<td>Intervention</td>
<td>Standardised assessment and referral pathways for pregnant women</td>
</tr>
<tr>
<td>Comparison</td>
<td>Women without standardised maternity care</td>
</tr>
<tr>
<td>Outcome</td>
<td>Better coordination of care and improved communication between care providers.</td>
</tr>
</tbody>
</table>

2.3 Clinical questions

The following clinical questions were generated to inform the operational framework scope and purpose:

The following questions were generated to inform the framework scope and purpose:

- How is the need for consultation/referral identified?
- What are the mechanisms for consultation/referral?
- What is the process for communication?
- What are the psychosocial factors to consider?

2.4 Exclusions

The following exclusions were identified in the operational framework scope:

- The framework is confined to non–urgent referral and transfer of care for pregnant women and will not replace existing protocols for emergency transfer and retrieval.
- Emergency retrieval and transport of obstetric, neonatal and paediatric patients in Queensland and Northern New South Wales are dealt with by Retrieval Services Queensland (RSQ) Guidelines for the Transfer of Pregnant Women.
- This framework does not cover back transfer to a referring facility.
2.5 Search strategy

A search of the literature was conducted during February 2010 and December 2010 and references updated in April 2016. The QCG search strategy is an iterative process that is repeated and amended as development evolves and the draft is refined, additional areas of interest emerge, areas of contention requiring more extensive review are identified or new evidence is identified. All guidelines and operational frameworks are developed using a basic search strategy. This involves both a formal and informal approach.

Table 3. Basic search strategy

<table>
<thead>
<tr>
<th>Step</th>
<th>Consideration</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Review clinical guidelines developed by other reputable groups relevant to the clinical speciality</td>
<td>• This may include national and/or international guideline writers, professional organisations, government organisations, state based groups. • This assists the guideline writer to identify: o The scope and breadth of what others have found useful for clinicians and informs the scope and clinical question development o Identify resources commonly found in guidelines such as flowcharts, audit criteria and levels of evidence o Identify common search and key terms o Identify common and key references</td>
</tr>
<tr>
<td>2. Undertake a foundation search using key search terms</td>
<td>• Construct a search using common search and key terms identified during Step 1 above • Search the following databases o PubMed o CINAHL o Medline o Cochrane Central Register of Controlled Trials o EBSCO o Embase • Studies published in English less than or equal to 5 years previous are reviewed in the first instance. Other years may be searched as are relevant to the topic • Save and document the search • Add other databases as relevant to the clinical area</td>
</tr>
<tr>
<td>3. Develop search word list for each clinical question.</td>
<td>• This may require the development of clinical sub-questions beyond those identified in the initial scope. • Using the foundation search performed at Step 2 as the baseline search framework, refine the search using the specific terms developed for the clinical question • Save and document the search strategy undertaken for each clinical question</td>
</tr>
<tr>
<td>4. Other search strategies</td>
<td>• Search the reference lists of reports and articles for additional studies • Access other sources for relevant literature o Known resource sites o Internet search engines o Relevant text books</td>
</tr>
</tbody>
</table>

2.5.1 Keywords

The following keywords were used in the basic search strategy. Other keywords may have been used for specific aspects of the guideline:
Shared care, maternity care, collaborative care, antenatal care, models of antenatal care, referral, transfer of care, consultation, multi-disciplinary meeting, non-urgent transfer, antenatal risk assessment,
2.6 Consultation
Major consultative and development processes occurred between January 2010 and October 2010. These are outlined in Table 4.

Table 4. Major development processes

<table>
<thead>
<tr>
<th>Process</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clinical lead</td>
<td>• The nominated Clinical Lead was approved by the Maternity Unit, Primary, community and Extended Care Branch</td>
</tr>
<tr>
<td>Consumer participation</td>
<td>• Consumer participation was invited from a range of consumer focused organisations</td>
</tr>
</tbody>
</table>
| Working party    | • An EOI for working party membership was distributed via email to Queensland clinicians and stakeholders (~1000) in December 2009  
                   • The working party was recruited from responses received  
                   • Working party members who participated in the working party consultation processes are acknowledged in the guideline  
                   • Working party consultation occurred in face-to-face meetings once a month from January to July 2010 and then by email. |
| Statewide consultation | • Consultation was invited from Queensland clinicians and stakeholders (~1000) during October 2010  
                         • Feedback was received primarily via email  
                         • All feedback was compiled and provided to the clinical lead and working party members for review and comment |

2.7 Endorsement
The operational framework was endorsed by the:
- Queensland Clinical Guidelines Steering Committee in May 2011 and re-endorsed as current in July 2016
- Statewide Maternity and Neonatal Clinical Network [Queensland] in May 2011

2.8 Publication
The operational framework and supplement were published on the QCG website in July 2016

The operational framework can be cited as:

The operational framework supplement can be cited as:
3 Levels of evidence
The framework is the consensus opinion of the working party.

3.1 Summary recommendations
Summary recommendations and levels of evidence are outlined in Table 5.

Table 5. Summary recommendations

<table>
<thead>
<tr>
<th>Recommendation</th>
<th>Grading of evidence</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Consider the clinical service capabilities of the facility in determining</td>

4 Implementation
This operational framework is applicable to all Queensland public and private maternity facilities. It can be downloaded in Portable Document Format (PDF) from [www.health.qld.gov.au/qcg](http://www.health.qld.gov.au/qcg).

4.1 Operational framework resources
There are no additional framework resources.

4.2 Suggested resources
During the development process no additional resources with potential to complement and enhance implementation and application were identified.

4.3 Implementation measures
Suggested activities to assist implementation are outlined below.

4.3.1 QCG measures
- Notify Chief Executive Officer and relevant stakeholders
- Monitor emerging new evidence to ensure the operational framework reflects contemporaneous practice
- Capture user feedback
- Record and manage change requests

4.3.2 Hospital and Health Service measures
Initiate, promote and support local systems and processes to integrate the operational framework into clinical practice, including:
- Hospital and Health Service (HHS) Executive endorse the operational frameworks and their use in the HHS and communicate this to staff
- Promote the introduction of the operational framework to relevant health care professionals
- Support education and training opportunities relevant to the operational framework and service capabilities
- Align clinical care with operational framework recommendations
