RTI Release

## Executive Summary

The Radiology Services Profile provides an annual overview of medical imaging service performance across all Hospital and Health Services (HHSs) through the completion of a data collection survey by each medical imaging facility. Data is presented by financial year with comparisons to previous years where relevant.

The number of facilities providing medical imaging services during the 2015-16 financial year was 128<sup>1</sup>. This compares to 126<sup>2</sup> facilities in the previous financial year. Of the 126 sites that provided data last year, one ceased providing medical imaging services (Tambo). During 2014-15, two sites that had previously stopped providing medical imaging services (Jandowae and Boulia) recommenced the provision of x-ray services. A new medical imaging service commenced at Hope Vale PHC.

Across Queensland Health medical imaging sites there has been a 5.6% increase in medical imaging examinations over the past year with over 2.2 million examinations performed in 2015-16.

The average reporting rate (percentage of examinations reported) remained at 98% and continues to be above the 90% target<sup>3</sup> for all facilities, except at one metropolitan site where the reporting rate was 87%.

In terms of service delivery model, two facilities within the Darling Downs HHS (Warwick and Goondiwindi) and one facility within the South West HHS (Roma), moved to a fully outsourced model, where the acquisition and reporting of medical imaging is performed through a private partnership arrangement. This brings the total number of facilities operating a fully outsourced model to 11. All other facilities continue to operate either a public service delivery model (10 facilities) or a partial outsource model (107), where some or all of the radiology reporting is performed through a private partnership.

All 16 HHSs utilise a private partnership for some or all of their radiology reporting (up from 14 in 2014-15). The percentage of outsourced reports has decreased from 45% in 2014-15 to 44% in 2015-16. 406,077 (43%) of outsourced reports were delivered to QH facilities electronically via the External Radiology Reporting Interface (ERRI)<sup>4</sup>.

The total combined funded FTEs<sup>5</sup> for 2015-16 was 1,648. This figure represents an increase of 3.6% when compared to the 2014-15 financial year.

There were a total of 75 FTE vacancies; a 5.9% decrease on the previous year. This represents a vacancy rate for the 2015-16 financial year of 4.56%.

91 of the 128 medical imaging sites (71%) are wholly or partially supported in general x-ray acquisition by hospital employed x-ray operators<sup>6</sup>.

---

<sup>1</sup> Including Mater Public

<sup>2</sup> Including Mater Public and with Mater Children's, RCH and LCCH counted as one site

<sup>3</sup> QH-GDL-017-2015 (Revised March 2015)

<sup>4</sup> Used by Queensland Radiology Information System (QRIS) facilities

<sup>5</sup> Includes QH and Mater funded positions and excludes x-ray operators

<sup>6</sup> A x-ray operator is a non-radiographer, trained and licenced to perform a limited range of x-ray examinations

The number of facilities providing ultrasound services increased from 48 to 52 with the commencement of ultrasound services at Wujal Wujal, Hope Vale, Goondiwindi and St George.

CT services were introduced at Goondiwindi, Roma and Warwick when these sites moved to a fully outsourced model.

In 2015-16, the average number of business days to the next available appointment increased across all modalities:

- Angiography / Interventional increased from 5 to 8 days
- CT increased from 4 to 5 days
- Fluoroscopy increased from 4 to 7 days
- MRI increased from 15 to 19 days
- Ultrasound (excluding obstetrics) increased from 5 to 9 days

RTI Release

## Introduction

The Radiology Services Profile provides an overview of medical imaging service performance across all HHSs. Data is collected via a manual process that involves completion of a data collection form (Appendix 1) for each medical imaging facility. The information is collated and analysed by Radiology Support, Biomedical Technology Services (BTS), Health Support Queensland (HSQ).

Data is presented by financial year with data going back to 2011-12.

## Data collection survey

The data collection survey is reviewed annually in consultation with the Medical Imaging Directors Association Queensland (MIDAQ).

## Significant events

In regards to medical imaging, there were no significant events during the 2015-16 financial year

RTI Release

## Summary of results

### Workload

In 2015-16, 2.2 million medical imaging examinations were provided by 128 Queensland Health and Mater Public facilities utilising 746 equipment units. There has been a 5.6% increase in medical imaging examinations over the past year with an overall increase of 17.3% since 2012-13 (Appendix 3).

This year there were no examinations recorded at Croydon, a rural and remote facility located in Cairns and Hinterland HHS. This is due to a process issue which has now been rectified.

In Torres and Cape HHS a new service commenced with the provision of medical imaging clinics at Hope Vale PHC in March 2016. The service provides fortnightly ultrasound and x-ray clinics at Hope Vale with imaging performed by staff from Cooktown medical imaging. In addition, a fortnightly ultrasound clinic commenced at Wujal Wujal - this service is also provided by Cooktown medical imaging.

In Darling Downs HHS, Goondiwindi and Warwick moved to a fully outsourced model. This saw the introduction of CT and ultrasound services at Goondiwindi Hospital and CT services at Warwick Hospital.

In South West HHS, Roma moved to a fully outsourced model. This saw the addition of CT and Fluoroscopy / Special Procedures at Roma Hospital. In addition, a Roma-based QH radiographer/sonographer began providing regular ultrasound clinics at St George Hospital.

### Workload by modality

In 2015-16 there were increases greater than 10% in the number of examinations performed within the following modalities: Cardiac, Fluoroscopy / Special Procedures and Operating theatre, as seen in Table 1.

	FY 2015-16		FY 2014-15		FY 2013-14		FY 2012-13

**Table 1 Medical imaging workload by modality**

The highest proportion of examinations performed by modality was general x-ray with 1,294,793 examinations which accounted for 59% of the total examinations performed (see Table 2).

CT was the second highest proportion of the examinations with 381,707 CT examinations performed, representing 17.3% of the total. Additional CT services commenced at Warwick, Goondiwindi and Roma, bringing the total number of facilities providing CT to 32.

Ultrasound was the third highest proportion of the examinations, with 289,909 ultrasound examinations performed, representing 13.2% of the total. In 2015-16 the provision of ultrasound services commenced at Wujal Wujal, Hope Vale, St George and Goondiwindi. This increased the total number of sites offering an ultrasound service, from 48 in 2014-15 to 52 in 2015-16.

Table 2 Ratio of modality workload to total workload

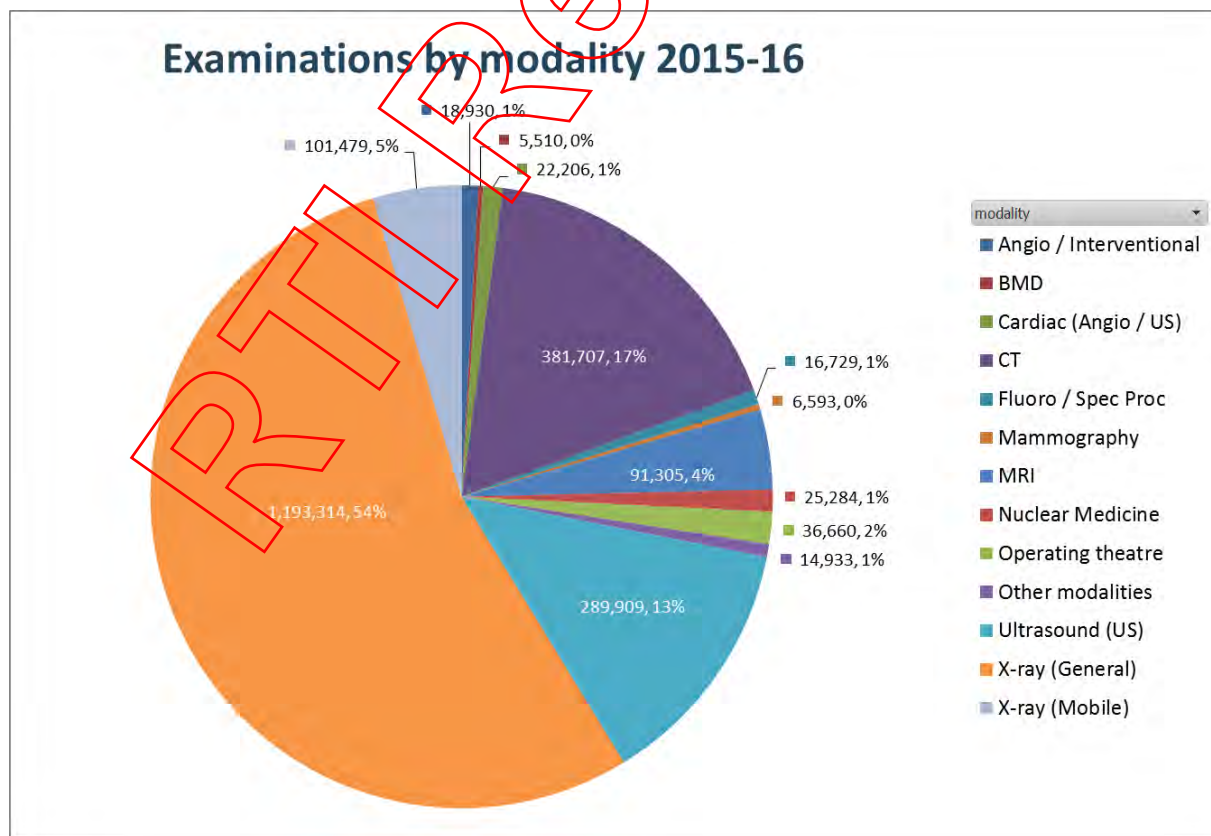

Figure 1 Medical imaging examination by modality

## Workload by HHS

Nearly all HHSs experienced an increase in workload – the exceptions were Central West HHS (decrease of 3.7%) and Metro South HHS (decrease of 4.7%). The Mater Public also observed a decrease in workload, with the number of examinations decreasing by 4.3%.

Four HHSs experienced an increase in examination numbers that was greater than 10% (Central Queensland, Children’s Health Queensland, Gold Coast and Mackay).

Of particular note is the 50.7% increase experienced by Children’s Health which follows on from a 70% increase in the 2014-15 financial year.<sup>7</sup>

Note that there are different Radiology Information Systems in use across the state and these may not count examinations (or attendances) in a consistent manner.

**Table 3 Workload by HHS (by examination numbers)**

## Workload by patient type

A breakdown of workload by patient type shows that 40% of patients are referred by emergency departments, 35% are outpatients and 25% are inpatients.

The data represented in Figure 2 shows the combined data provided by all sites.<sup>8</sup>

Table 4 shows a similar percentage of private patient examinations compared to previous years. A more detailed breakdown can be seen in Appendix 6.<sup>8</sup>

<sup>7</sup> The 70% increase in 2014-15 was attributed to the merge of the Mater Children’s and RCH.

<sup>8</sup> Some sites were unable to provide a breakdown of examinations by patient type or were only able to provide a partial breakdown by patient type, therefore this data does not represent all examinations.

### Examinations by patient type 2015-2016

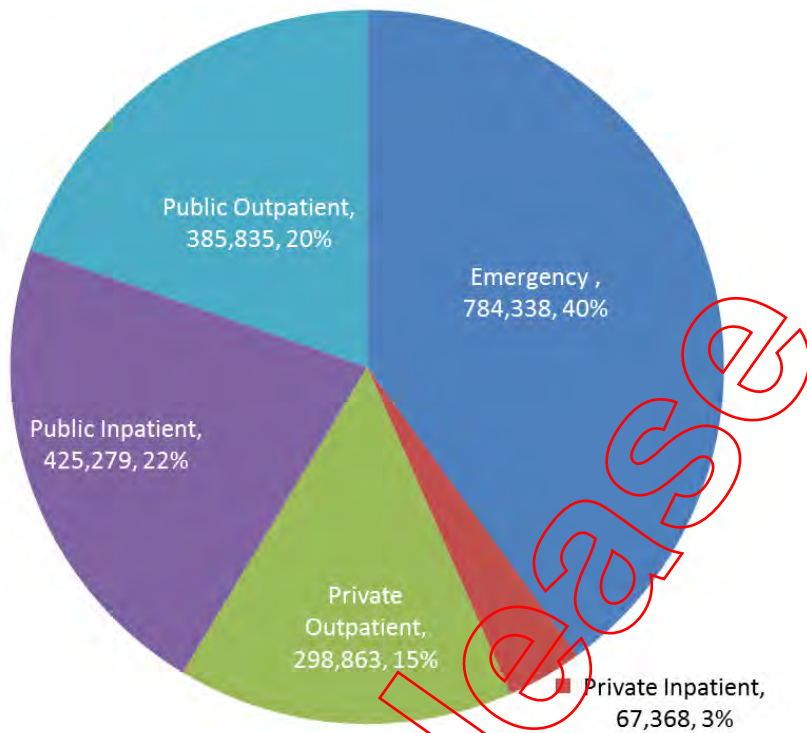

Figure 2 Workload by patient type

Private Ratio				
	15-16	14-15	13-14	12-13
Cairns And Hinterland	24%	23%	0%	29%

<b>Grand Total</b>	<b>17%</b>	<b>20%</b>	<b>16%</b>	<b>16%</b>

Table 4 Percentage of private patients

## Workload by Clinical Services Capability Framework level

The Clinical Services Capability Framework (CSCF) includes 6 levels for medical imaging with level 1 managing the least complex patients and level 6 managing the highest level of patient complexity.

Level 5 facilities continue to perform the highest percentage of the combined workload with 939,604 examinations performed (43% of the total).

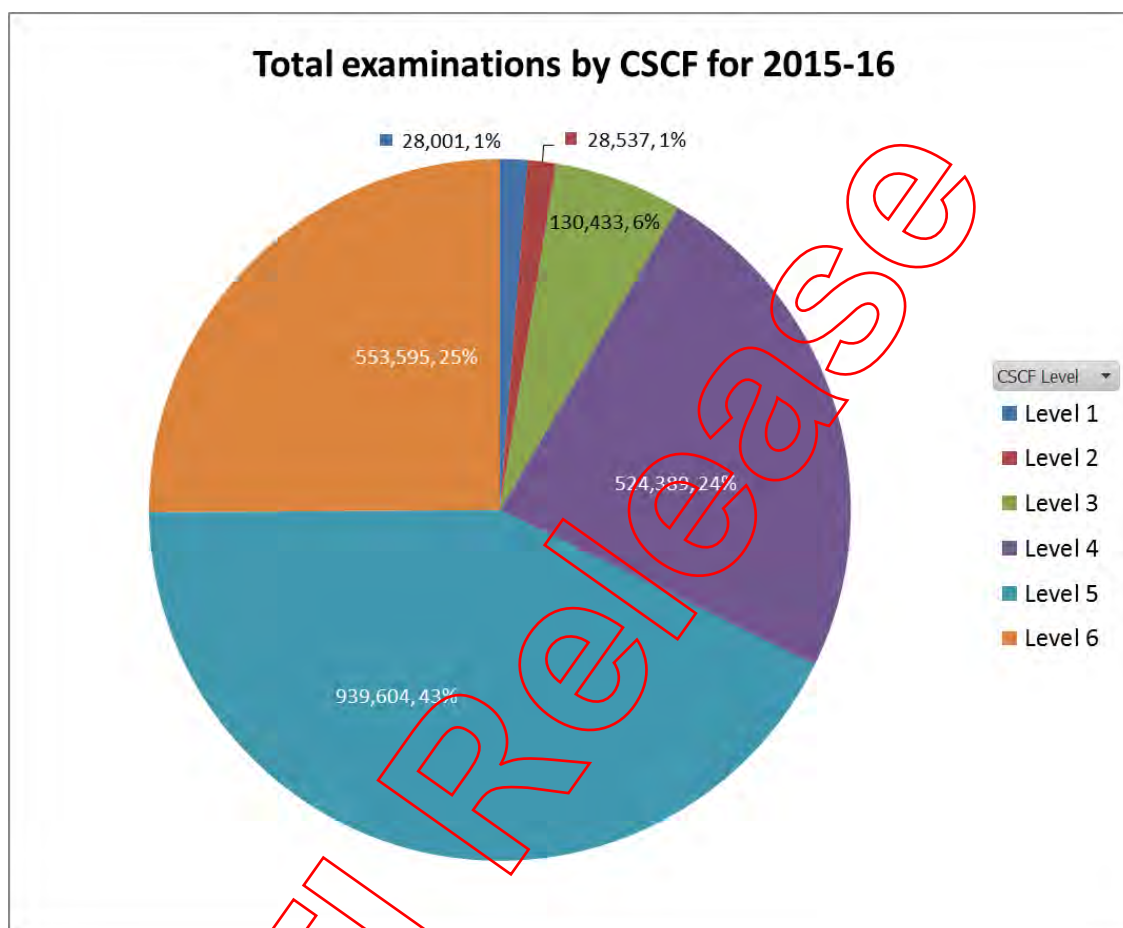

Figure 3 Workload by CSCF level

## Service delivery models

In terms of service delivery model, two facilities within the Darling Downs HHS (Warwick and Goondiwindi) and one facility within the South West HHS (Roma), moved to a fully outsourced model, where the acquisition and reporting of medical imaging is now performed through a private partnership arrangement. This brings the total number of facilities operating a fully outsourced model to 11. All other facilities continue to operate either a public service delivery model (10 facilities) or a partial outsource model (107), where some or all of the radiology reporting is performed through a private partnership.

## Radiology reporting

### Reporting rates

The average reporting rate (percentage of examinations reported) remained at 98% and continues to be above the 90% target<sup>9</sup> for all facilities, except TPCH which has a reporting rate of 87% (this is down from a 99% reporting rate in 2014-15). Table 5 shows a four year comparison by HHS of reporting rate and the percentage of those reports available within 24 hours (<24hr rate). A four year comparison by facility is provided in Appendix 7.

	2015-16		2014-15		2013-14		2012-13

<b>Grand Total</b>	<b>98%</b>	<b>61%</b>	<b>98%</b>	<b>63%</b>	<b>93%</b>	<b>66%</b>	<b>89%</b>	<b>61%</b>

**Table 5 Reporting rates by HHS**

### Report turnaround times

The Guideline for the Provision of diagnostic imaging reports<sup>9</sup> includes a requirement for each HHS to have a local procedure for monitoring report turnaround times.

The percentage of reports available within 24 hours was provided by 110 of the 128 sites and is included in Table 5. Note the wide variation (34%-95%) across the HHSs. The clinical appropriateness of the report turnaround time should be determined by the individual HHS to ensure that timeframes are relevant to the facility, patient type and modality.

### Report provider

All 16 HHSs utilise a private partnership for some or all of their radiology reporting (up from 14 in 2014-15). The percentage of outsourced reports has decreased from 45% in 2014-15 to 44% in 2015-16. 406,077 (43%) of outsourced reports were delivered to QH facilities electronically via the External Radiology Reporting Interface (ERRI).<sup>10,11</sup> This represents an increase of 14% on the 2014-15 financial year when 356,339 reports were delivered via ERRI.

Figure 4 and Table 6 provide a summary of the reporting providers utilised by the HHSs and the Mater Public Hospital.

<sup>9</sup> QH-GDL-017-2015 (Revised March 2015)

<sup>10</sup> Used by Queensland Radiology Information System (QRIS) facilities

<sup>11</sup> Non-QRIS sites use an interface similar to ERRI

Table 6 Report provider by HHS

## Workforce

Between 2014-15 and 2015-16, the number of funded FTEs<sup>12</sup> increased by 3.6% from 1,591 to 1,648. Some HHSs experienced a significant change in FTE - explanations for these changes are detailed below:

A change in service provider to a fully outsourced model at one facility (Roma) in the South West HHS decreased their total FTE by 35%, owing to the small number of staff working within South West HHS. By comparison, a change in service provider to a fully outsourced model at two facilities (Warwick and Goondiwindi) within Darling Downs HHS appears to have had little impact, due to a much higher number of FTEs within the Darling Downs HHS.

Cairns and Hinterland HHS saw a 42% increase in their total FTE, due to the provision of:

- ultrasound services expanding to 7 days per week in late 2015
- MRI services in the process of expanding to 7 days per week
- CT and x-ray services expanding to 24/7 as of the 1<sup>st</sup> August 2016
- additional administration staff and medical imaging assistants to support the expansion of MRI services
- the expansion of nursing services (within medical imaging) to include evenings and weekends, as of May 2016

Gold Coast HHS medical imaging departments increased their total FTE by 21.2% since 2014-15, in response to internal and external reviews of their service as well as surges in activity following the opening of the Gold Coast University Hospital.

Torres and Cape HHS saw their FTE increase from 7 to 8 (14.3% increase). This is owing to an additional radiographer/sonographer position which was funded at Cooktown to accommodate the recommencement of birthing services at Cooktown as well as the provision of ultrasound services at Wujal Wujal and Hope Vale.

Workforce data by facility is provided in Appendix 9.

## Vacancies

The total vacancy rate across all sites surveyed has decreased from 5.02% in 2014-15 to 4.56% in 2015-16, however the unfilled vacancy rate has increased from 1.76% to 2.6%. A vacancy is regarded as a funded FTE (or part thereof) where the occupant has resigned and left the organisation permanently. A breakdown of backfilled and unfilled vacancies by HHS is included in Table 7.

**Table 9 MRP vacancies by HHS**

### X-ray operators

The number of x-ray operators has increased slightly from 316 in 2014-15 to 330 in 2015-16. X-ray operators provide general x-ray services (or support a sole radiographer) at 91 rural and remote facilities. See Appendix 10 for a detailed breakdown of x-ray operator numbers (including trainees).

<sup>14</sup> Includes radiographers, sonographers, nuclear medicine technologists, medical physicists and radiochemists

## Sonographers

The vacancy rate for sonographers and radiographers/sonographers has increased from 6.9% in 2014-15 to 11.3% in 2015-16. This remains as the highest vacancy rate of the professional groups in medical imaging. A breakdown by HHS is provided in Table 10.

**Table 10 Sonographer vacancies by HHS**

Table 11 details the number of FTE dedicated to ultrasound from the combined pool of sonographers and radiographer/sonographers. This data was collected for the first time in 2014-15. Comparisons to the data obtained last year demonstrate that the total pool of sonographers and radiographer/sonographers has increased (from 145 to 155, 6.9% increase). However, the ultrasound FTE has only increased from 108 to 112 which corresponds to a 3.7% increase.

The ultrasound workforce is predominantly employed within normal business hours, with 88.5% of ultrasound staff rostered to work within normal business hours (up from 74.3% in 2014-15).

Significant variation is seen between the HHSs in regard to the percentage of the ultrasound workforce's time that is dedicated to ultrasound (percentages range from 40% in South West HHS to 98.2% in Darling Downs HHS).

	Rad/Sono Sonographer	Ultrasound FTE	% Alloc	Breakdown Inside Normal Hrs	Breakdown Outside Normal Hrs

## Appointment waiting times

In 2015-16, the average number of business days to the next available appointment increased across all modalities:

- Angiography / Interventional increased from 5 to 8 days
- CT increased from 4 to 5 days
- Fluoroscopy increased from 4 to 7 days
- MRI increased from 15 to 19 days
- Ultrasound (excluding obstetrics) increased from 5 to 9 days

A detailed breakdown of appointment waiting times by facility is provided in Appendices 8a (Ultrasound), 8b (MRI), 8c (CT) and 8d (Angio /Interventional).

## Data quality

Data is recorded as provided on the data collection sheet submitted by each medical imaging site. Comparisons between years are difficult as some data was not provided this year or in previous years. To provide a metric for completeness a score was allocated to the following categories, based on the data provided by each site –

**Examinations** – Score 0 for no details, 0.5 if examination breakdown by (i) modality and (ii) patient type provided, 1 if breakdown provided and totals in sections A and B match.

**Attendance** – Score 0 for no details, 0.5 if attendance breakdown by (i) modality and (ii) patient type provided, 1 if breakdown provided and totals in sections A and B match.

**Reports** – Score 0 for no reporting details, 0.5 if report totals provided, 1 if total for reporting breakdown by type agrees with total for reporting turnaround time.

**Workforce** – Score 0 for no workforce details (total of XO and FTE), Score 1 if total is greater than 0.

**Wait times** – Score 0 for no wait time details (for sites with CSCF greater than 3), Score 1 if total wait time is greater than 0 or if CSCF level is 3 or less.

**Equipment** – Score 0 for no equipment unit details. Score 1 if total is greater than 0.

Table 14 shows an improvement in the average quality of all results, except the Examinations Score, when totals are compared to the previous year.

	Responses	Examinations Score	Attendance Score	Reports Score	Workforce Score	Wait time Score	Equipment Score
2011-12	130	0.88	0.27	0.89	0.95	0.97	0.73
2012-13	131	0.94	0.83	0.91	0.99	0.98	0.73
2013-14	130	0.91	0.80	0.90	0.97	0.96	0.65
2014-15	129	0.98	0.91	0.91	0.91	0.98	0.96
2015-16	128	0.97	0.96	0.96	0.93	0.98	1.00

**Table 14 Data quality score by year**

The workforce score is lower than would be expected as it includes zero scores for outsourced facilities. By removing the 11 outsourced sites we acquire an adjusted figure for 2015-16 as shown below.

	Count	Examinations Score	Attendance Score	Reports Score	Workforce Score	Wait time Score	Equipment Score
2015-16	117	0.98	0.97	0.97	1.00	0.98	1.00

**Table 15 Adjusted data quality score**

A detailed breakdown of the responses for 2015-16 is provided in Appendix 2.

## Acknowledgements

This report is made possible by the data contributions of Queensland Health, Mater and private sector medical imaging staff across all facilities.

Special thanks to Steven Bridgette and Robert Nemeth from Radiology Informatics Support Unit (RISU), for their comprehensive handover of the processes used to gather and analyse data from medical imaging facilities.
