	Dosage	<ul style="list-style-type: none"> Daily requirement² 2–6 mmol/kg/day <ul style="list-style-type: none"> Divide into 4 or more doses to reduce gastric upset 								
	Preparation	<ul style="list-style-type: none"> Nil required 								
Administration	<ul style="list-style-type: none"> Draw up prescribed dose into oral/enteral syringe Oral/OGT/NGT with feed 									
INTRAVENOUS	<table border="1"> <tr> <td>Presentation</td> <td> <ul style="list-style-type: none"> Vial: 23.4% (equivalent to 40 mmol in 10 mL) </td> </tr> <tr> <td>Dosage</td> <td> <ul style="list-style-type: none"> Daily requirement² 2–6 mmol/kg/day </td> </tr> <tr> <td>Preparation</td> <td> <ul style="list-style-type: none"> Must be diluted before administration <i>Example preparation (for CVL administration)</i> <ul style="list-style-type: none"> Draw up 10 mmol/kg (2.5 mL/kg) and make up to 30 mL total volume with compatible fluid <i>Infused at 0.5 mL/hour for 24 hours gives 4 mmol/kg/day</i> </td> </tr> <tr> <td>Administration</td> <td> <ul style="list-style-type: none"> Draw up prescribed dose Dilute with compatible fluid or add to parenteral fluids for infusion at prescribed hourly rate </td> </tr> </table>	Presentation	<ul style="list-style-type: none"> Vial: 23.4% (equivalent to 40 mmol in 10 mL) 	Dosage	<ul style="list-style-type: none"> Daily requirement² 2–6 mmol/kg/day 	Preparation	<ul style="list-style-type: none"> Must be diluted before administration <i>Example preparation (for CVL administration)</i> <ul style="list-style-type: none"> Draw up 10 mmol/kg (2.5 mL/kg) and make up to 30 mL total volume with compatible fluid <i>Infused at 0.5 mL/hour for 24 hours gives 4 mmol/kg/day</i> 	Administration	<ul style="list-style-type: none"> Draw up prescribed dose Dilute with compatible fluid or add to parenteral fluids for infusion at prescribed hourly rate 	
	Presentation	<ul style="list-style-type: none"> Vial: 23.4% (equivalent to 40 mmol in 10 mL) 								
	Dosage	<ul style="list-style-type: none"> Daily requirement² 2–6 mmol/kg/day 								
	Preparation	<ul style="list-style-type: none"> Must be diluted before administration <i>Example preparation (for CVL administration)</i> <ul style="list-style-type: none"> Draw up 10 mmol/kg (2.5 mL/kg) and make up to 30 mL total volume with compatible fluid <i>Infused at 0.5 mL/hour for 24 hours gives 4 mmol/kg/day</i> 								
Administration	<ul style="list-style-type: none"> Draw up prescribed dose Dilute with compatible fluid or add to parenteral fluids for infusion at prescribed hourly rate 									
Special considerations	<ul style="list-style-type: none"> Dosage varies according to degree of hyponatraemia Manage doses above 6–8 mmol/kg/day cautiously (refer to side effects) in consultation with SMO or NNP CVL recommended for administration of any hypertonic saline solutions (greater than 0.9%)³ Maximum concentration for CVL is 0.85 mmol/mL 									
Monitoring	<ul style="list-style-type: none"> Electrolytes 6–24 hourly to evaluate rate of sodium level rise (or as requested by SMO) Extravasation risk if administered via peripheral IV 									
Compatibility	<ul style="list-style-type: none"> 5% glucose⁴, 10% glucose⁵, 0.9% sodium chloride⁵ 									
Incompatibility	<ul style="list-style-type: none"> No information: check individual drug or solution⁶ 									
Interactions	<ul style="list-style-type: none"> Nil known 									
Stability	<ul style="list-style-type: none"> Vial <ul style="list-style-type: none"> Store at room temperature below 30 °C⁶ Oral solution <ul style="list-style-type: none"> Store in refrigerator 2–8 °C Discard 4 weeks after opening or as per local infection control policy (limited evidence) 									

Side effects	<ul style="list-style-type: none"> • Appropriate parenteral use for electrolyte replacement is unlikely to result in adverse effects⁶ • Mild hypernatraemia symptoms include⁶: <ul style="list-style-type: none"> ○ Reduced salivation and lacrimation, fever, tachycardia, hypertension, restlessness, irritability and weakness • Excessive administration may lead to hypernatraemia, causing⁶: <ul style="list-style-type: none"> ○ Organ dehydration and dysfunction, hypokalaemia and acidosis ○ Congestive heart failure and pulmonary oedema particularly if cardiovascular disease or receiving corticosteroids or drugs that give rise to sodium retention ○ Loss of bicarbonate with an acidifying effect due to excessive chloride ions • Inadvertent administration of concentrated sodium chloride solutions⁶: <ul style="list-style-type: none"> ○ May result in sudden hypernatraemia and potential complications (e.g. somnolence, confusion progressing to convulsions, cardiovascular shock, CNS disorders, extensive haemolysis, respiratory failure and cortical necrosis of the kidney) • Rapid administration (faster than 12 mmol over 24 hours) may cause osmotic stress and subsequent demyelination injury to the brain⁷
Actions	<ul style="list-style-type: none"> • Sodium is the principle cation of extracellular fluid and chloride is the principle anion of extracellular fluid • Sodium content normally determines the volume of extracellular fluid, and is important in the regulation of osmolarity, acid-base balance, and the membrane potential of cells
Abbreviations	CNS: central nervous system, CVL: central venous line, IV: intravenous, OGT: orogastric tube, NGT: nasogastric tube, NNP: neonatal nurse practitioner, PN: parenteral nutrition, SMO: most senior medical officer
Keywords	Hyponatraemia, hypernatraemia, sodium chloride, strong salt, 23.4% sodium chloride, electrolyte
