

Queensland Health Facilities

Queensland Health facilities identified by recent AUSLAB laboratory information system data extracts analysed for the Aboriginal and Torres Strait Islander STI drug replacement program.

- It is important to note that the AUSLAB data analysis relies on the Aboriginal and Torres Strait Islander identification field being completed on the pathology request form and in the dataset.
- Eligibility is based on having an average of five or more positive chlamydia, gonorrhoea or trichomoniasis pathology results for Aboriginal and Torres Strait Islander patients during six months and not receiving free medication through the [Commonwealth Remote Area Aboriginal Health Services and the Pharmaceutical Benefits Scheme](#)
- Facilities with **less than an average of five** positive results for chlamydia, gonorrhoea and trichomoniasis combined (total positive tests any infection for six months) are shaded and are **not encouraged to enrol** for the program.
