

QoVAX SET

Mixed-dose 1 & 2 Study

Some people have received different COVID-19 vaccine types for dose one and two (e.g. AstraZeneca then Pfizer, or Pfizer then AstraZeneca).

We want to compare the immune response of these adults with adults who received two doses of the same COVID-19 vaccine type (e.g. Pfizer and Pfizer).

Who can take part?

You might be able to take part in the QoVAX SET Mixed-dose 1 & 2 Study if you:

- have not received your booster shot,
- have received two doses of the COVID-19 vaccine,
- are 18 years or older and a resident of Queensland, and
- can read and understand the consent form.

This study is only open to people who live in the Brisbane metropolitan area, Gold Coast or the Sunshine Coast areas.

www.health.qld.gov.au/research-reports/research-projects/qovax-set-covid-19-vaccine-research-program/study-2-mixed-dose

What is involved?

1. You need to read and understand the consent form.
 - Scan the QR code below or visit www.health.qld.gov.au/research-reports/research-projects/qovax-set-covid-19-vaccine-research-program/study-2-mixed-dose.
2. Complete a survey online.
 - The survey will ask you things about your health and lifestyle, and if you experienced any adverse reactions following any of your COVID-19 vaccine shots.
3. Give a saliva (spit) and blood sample at a **participating** Pathology Queensland or **participating** QML Pathology collection centre.
 - Only certain pathology locations are helping us run this study. Visit the QoVAX SET Program website for a list of **participating** locations.
4. Take all the pathology request forms with you. We will email or send them to you once you complete the consent form and survey.
5. Please write your QoVAX SET participant identification (this begins with QVMD) in the surname field and your date on birth on the pathology request forms. We need this information to link all your collection samples.
