<b>Warfarin</b>	Coumadin, Marevan	<b>Tirofiban</b>	Aggrastat		

## Complementary and Herbal Medications

Some ingredients in complementary and herbal medicines (e.g. fish oil and turmeric) may have blood thinning effects, increase bleeding risk, or interact with anaesthetics or other medications. These products may also be contaminated with ingredients not listed on the label. Prior to a procedure it is recommended that **all complementary and herbal preparations** are ceased. Consult your doctor for further information.

Developed by Medication Services Queensland November 2017. Last review September 2021.

This list contains known anticoagulants listed in available Australian product references. New products or alternative brands may enter the market at any time and clinicians should always ensure they refer to relevant references if unsure about any product.
