

CTI Learning Matrix

Information

The Allied Health Professions' Office of Queensland publishes a range of clinical task instructions (CTIs) to support the implementation of skill sharing in allied health teams in Queensland hospital and health services. CTIs describe the scope of the skill shared task including indications and limitations, safety and quality considerations, and the training requirements of a health professional that will acquire competency in the task and include it within their professional scope.

CTIs are presented in clusters related to a clinical area. CTIs in a cluster have related underpinning knowledge and can have implementation inter-relationships. That is, a CTI can build on knowledge and skills developed in another CTI. CTIs may also reference and apply the indications, limitations, safety considerations and training requirements of another CTI.

This document presents summary tables of the inter-relationships between CTIs. Each CTI is represented by its code. Prior to commencing training, a CTI may require the health professional to have achieved competency in another CTI ("pre-requisite CTI"). Training in two CTIs may also be undertaken at the same time ("co-requisite CTIs"). The tables are a quick reference tool to assist allied health teams develop training and implementation plans for skill sharing. Details on specific inter-relationships are presented in individual CTI documents.

Terms

Pre-requisite CTIs – these CTIs are listed under the required training for the CTI.

Co-requisite CTIs – these CTIs are recommended to be trained concurrently as part of the service delivery model and are linked i.e. assessment and intervention.

Equivalent occupational competence -

Key

^ CTI will apply unless the trainee demonstrates equivalent occupational competence

* CTI will apply in some clinical situations and settings – see the CTI for details

Activities of Daily Living (ADL) and Function
