Guideline supplement: Instrumental vaginal birth
1 Introduction

This document is a supplement to the Queensland Clinical Guideline (QCG) Instrumental vaginal birth. It provides supplementary information regarding guideline development, makes summary recommendations, suggests measures to assist implementation and quality activities and summarises changes (if any) to the guideline since original publication. Refer to the guideline for abbreviations, acronyms, flow charts and acknowledgements.

1.1 Funding

The development of this guideline was funded by Healthcare Improvement Unit, Queensland Health. Consumer representatives were paid a standard fee. Other working party members participated on a voluntary basis.

1.2 Conflict of interest

Declarations of conflict of interest were sought from working party members as per the Queensland Clinical Guidelines Conflict of Interest statement. Conflicts of interest were recorded and managed as per usual processes.

1.3 Development process

This version of the guideline followed the QCG New development process.

1.4 Summary of changes

Queensland clinical guidelines are reviewed every 5 years or earlier if significant new evidence emerges. Table 1 provides a summary of changes made to the guidelines since original publication.

<table>

2 Methodology

Queensland Clinical Guidelines (QCG) follows a rigorous process of guideline development. This process was endorsed by the Queensland Health Patient Safety and Quality Executive Committee in December 2009. The guidelines are best described as ‘evidence informed consensus guidelines’ and draw from the evidence base of existing national and international guidelines and the expert opinion of the working party.

2.1 Topic identification

The topic was identified as a priority following clinician requests and was endorsed by the Queensland Clinical Guidelines Steering committee in 2017.

2.2 Scope

The scope of the guideline was determined using the following framework.

Table 2. Scope framework

<table>
<thead>
<tr>
<th>Scope framework</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Population</strong></td>
<td>Women with a live, cephalic fetus in the second stage of labour, who have indications for instrumental vaginal birth</td>
</tr>
<tr>
<td><strong>Purpose</strong></td>
<td>Develop an evidence informed clinical guideline on:</td>
</tr>
<tr>
<td></td>
<td>o Indications for instrumental vaginal birth</td>
</tr>
<tr>
<td></td>
<td>o Contraindications for instrumental vaginal birth</td>
</tr>
<tr>
<td></td>
<td>o Safety consideration during instrumental vaginal birth</td>
</tr>
<tr>
<td><strong>Outcome</strong></td>
<td>Guide identification and discussion about:</td>
</tr>
<tr>
<td></td>
<td>o Women in second stage labour for whom instrumental vaginal birth may be appropriate</td>
</tr>
<tr>
<td></td>
<td>o Risks and benefits of instrumental vaginal birth</td>
</tr>
<tr>
<td></td>
<td>o Risks and benefits by type of instrument</td>
</tr>
<tr>
<td></td>
<td>o Best practice maternal and fetal care during instrumental vaginal birth and immediately postpartum</td>
</tr>
<tr>
<td><strong>Exclusions</strong></td>
<td>Routine labour and postpartum care</td>
</tr>
<tr>
<td></td>
<td>Management of fetal distress</td>
</tr>
<tr>
<td></td>
<td>Perineal repair</td>
</tr>
<tr>
<td></td>
<td>Specific techniques/procedures for application and use of individual instruments</td>
</tr>
</tbody>
</table>

2.3 Clinical questions

The following clinical questions were generated to inform the guideline scope and purpose:

- What are the indications and contraindications for instrumental vaginal birth?
- What are the risk factors for unsuccessful instrumental vaginal birth?
- What are the risks and benefits of forceps versus vacuum?
- What factors influence the choice of instrument (vacuum or forceps) when instrumental vaginal birth is indicated?
- What is considered best practice care prior to and during instrumental birth?
- What is considered best practice care following instrumental birth?
2.4 Search strategy

A search of the literature was conducted during January and August 2018. The QCG search strategy is an iterative process that is repeated and amended as guideline development occurs (e.g. if additional areas of interest emerge, areas of contention requiring more extensive review are identified or new evidence is identified). All guidelines are developed using a basic search strategy. This involves both a formal and informal approach.

Table 3. Basic search strategy

<table>
<thead>
<tr>
<th>Step</th>
<th>Consideration</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Review clinical guidelines developed by other reputable groups relevant to the clinical speciality  &lt;br&gt;• This may include national and/or international guideline writers, professional organisations, government organisations, state based groups.  &lt;br&gt;• This assists the guideline writer to identify:  &lt;br&gt;o The scope and breadth of what others have found useful for clinicians and informs the scope and clinical question development  &lt;br&gt;o Identify resources commonly found in guidelines such as flowcharts, audit criteria and levels of evidence  &lt;br&gt;o Identify common search and key terms  &lt;br&gt;o Identify common and key references</td>
</tr>
<tr>
<td>2.</td>
<td>Undertake a foundation search using key search terms  &lt;br&gt;• Construct a search using common search and key terms identified during Step 1 above  &lt;br&gt;• Search the following databases  &lt;br&gt;o PubMed  &lt;br&gt;o CINAHL  &lt;br&gt;o Medline  &lt;br&gt;o Cochrane Central Register of Controlled Trials  &lt;br&gt;o EBSCO  &lt;br&gt;o Embase  &lt;br&gt;• Studies published in English less than or equal to 5 years previous are reviewed in the first instance. Other years may be searched as are relevant to the topic  &lt;br&gt;• Save and document the search  &lt;br&gt;• Add other databases as relevant to the clinical area</td>
</tr>
<tr>
<td>3.</td>
<td>Develop search word list for each clinical question.  &lt;br&gt;• This may require the development of clinical sub-questions beyond those identified in the initial scope.  &lt;br&gt;• Using the foundation search performed at Step 2 as the baseline search framework, refine the search using the specific terms developed for the clinical question  &lt;br&gt;• Save and document the search strategy undertaken for each clinical question</td>
</tr>
<tr>
<td>4.</td>
<td>Other search strategies  &lt;br&gt;• Search the reference lists of reports and articles for additional studies  &lt;br&gt;• Access other sources for relevant literature  &lt;br&gt;o Known resource sites  &lt;br&gt;o Internet search engines  &lt;br&gt;o Relevant text books</td>
</tr>
</tbody>
</table>

2.4.1 Keywords

The following keywords were used in the basic search strategy: assisted vaginal birth, instrumental vaginal birth, vacuum, forceps, instrumental birth, sequential instrumentation, operative vaginal delivery, operative vaginal birth. Other keywords may have been used for specific aspects of the guideline.
2.5 Consultation

Major consultative and development processes occurred between July and September 2018. These are outlined in Table 4.

Table 4. Major guideline development processes

<table>
<thead>
<tr>
<th>Process</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clinical lead</td>
<td>• The nominated co-clinical leads were approved by QCG Steering Committee</td>
</tr>
<tr>
<td>Consumer participation</td>
<td>• Consumer participation was invited from a range of consumer focused organisations who had previously accepted an invitation for on-going involvement with QCG</td>
</tr>
</tbody>
</table>
| Working party            | • An EOI for working party membership was distributed via email to Queensland clinicians and stakeholders (~2000) in June 2018  
                           | • The working party was recruited from responses received  
                           | • Working party members who participated in the working party consultation processes are acknowledged in the guideline  
                           | • Working party consultation occurred in a virtual group via email                                                                                                                                 |
| Statewide consultation   | • Consultation was invited from Queensland clinicians and stakeholders (~2000) during August 2018  
                           | • Feedback was received primarily via email  
                           | • All feedback was compiled and provided to the clinical lead and working party members for review and comment                                                                 |

2.6 Endorsement

The guideline was endorsed by the:

• Queensland Clinical Guidelines Steering Committee in November 2018
• Statewide Maternity and Neonatal Clinical Network [Queensland] in November 2018

2.7 Citation

The recommended citation of Queensland Clinical Guidelines is in the following format:

EXAMPLE:
3 Levels of evidence

The levels of evidence identified by U.S. Preventive Services Task Force (and contained within the ACOG Practice Bulletin Number 154 Operative vaginal delivery¹) were used to inform the summary recommendations outlined in Table 5. Levels of evidence and grade of recommendation.

Note that the consensus definition* relates to the clinical experience of the guideline’s clinical leads and working party. Summary recommendations are outlined in Table 6. Summary recommendations.

Table 5. Levels of evidence and grade of recommendation

4 Implementation
This guideline is applicable to all Queensland public and private maternity facilities. It can be downloaded in Portable Document Format (PDF) from www.health.qld.gov.au/qcg

4.1 Guideline resources
The following guideline components are provided on the website as separate resources:

- Education resource: Instrumental vaginal birth
- Knowledge assessment: Instrumental vaginal birth
- Parent information: Instrumental vaginal birth

4.2 Suggested resources
During the development process stakeholders identified additional resources with potential to complement and enhance guideline implementation and application. The following resources have not been sourced or developed by QCG but are suggested as complimentary to the guideline:

- A procedure for the use of ultrasound assessment to determine fetal head station and position
- Use of standardised documentation during the instrumental vaginal birth procedure (e.g. Queensland Health instrumental vaginal birth pathway)

4.3 Implementation measures
Suggested activities to assist implementation of the guideline are outlined below.

4.3.1 QCG measures

- Notify Chief Executive Officer and relevant stakeholders
- Monitor emerging new evidence to ensure guideline reflects contemporaneous practice
- Capture user feedback
- Record and manage change requests

4.3.2 Hospital and Health Service measures
Initiate, promote and support local systems and processes to integrate the guideline into clinical practice, including:

- Hospital and Health Service (HHS) Executive endorse the guidelines and their use in the HHS and communicate this to staff
- Promote the introduction of the guideline to relevant health care professionals
- Support education and training opportunities relevant to the guideline and service capabilities
- Align clinical care with guideline recommendations
- Undertake relevant implementation activities as outlined in the Guideline implementation checklist available at www.health.qld.gov.au/qcg
4.4 Quality measures
Auditing of guideline recommendations and content assists with identifying quality of care issues and provides evidence of compliance with the National Safety and Quality Health Service (NSQHS) Standards [Refer to Table 7. NSQHS Standard 1]. Suggested audit and quality measures are identified in Table 8. Clinical quality measures.

Table 7. NSQHS Standard 1

<table>
<thead>
<tr>
<th>NSQHS Standard 1: Clinical governance</th>

<tr>
<td><strong>Clinical performance and effectiveness</strong></td>
</tr>
<tr>
<td><strong>Criterion 1.27:</strong></td>
</tr>
<tr>
<td>Evidence based care</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

The following clinical quality measures are suggested:

Table 8. Clinical quality measures

<table>
<thead>
<tr>
<th>No</th>
<th>Audit criteria</th>
<th>Guideline Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>What proportion of instrumental births had station and position of the head documented at the time of instrument application</td>
<td>Principles of safe instrumental vaginal birth</td>
</tr>
<tr>
<td>2.</td>
<td>What proportion of women having instrumental vaginal birth had a standard documentation template commenced (e.g. instrumental vaginal birth pathway)</td>
<td>Principles of safe instrumental vaginal birth</td>
</tr>
<tr>
<td>3.</td>
<td>What is the proportion of women having instrumental vaginal birth who had sequential instrumentation</td>
<td>Principles of safe instrumental vaginal birth</td>
</tr>
<tr>
<td>4.</td>
<td>What is the proportion of women experiencing third or fourth degree perineal tear following instrumental vaginal birth</td>
<td>Post-intervention care</td>
</tr>
<tr>
<td>5.</td>
<td>What is the proportion of neonates experiencing neonatal morbidity following instrumental vaginal birth (e.g. subgaleal haemorrhage/brachial plexus injury/fracture/facial nerve palsy/cerebral haemorrhage, low Apgar &lt;7 at 5 minutes and cord arterial pH &lt;7.1)</td>
<td>Post-intervention care</td>
</tr>
</tbody>
</table>

4.5 Areas for future research
During development the following areas where identified as having limited or poor quality evidence to inform clinical decision making. Further research in these areas may be useful.

- Is there a maximum number of attempts or pulls that should be allowed before an instrumental procedure is abandoned?
- Can specific populations of women be identified who would benefit from episiotomy with an instrumental vaginal birth
4.6 Safety and quality

In conjunction with the Queensland Clinical Guideline Standard care\(^3\), Implementation of this guideline provides evidence of compliance with the National Safety and Quality Health Service Standards and Australian Council on Healthcare Standards (ACHS) Evaluation and Quality Improvement Program (EQuIP) National accreditation programs.\(^2\)\(^,\)\(^4\)

<tr>
<td><strong>NSQHS Standard 6: Communicating for safety (continued)</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Communication of critical information</strong>&lt;br&gt;Systems to effectively communicate critical information and risks when they emerge or change are used to ensure safe patient care.</td>
<td>Communicating critical information&lt;br&gt;6.9 Clinicians and multidisciplinary teams use clinical communication processes to effectively communicate critical information, alerts and risks, in a timely way, when they emerge or change to:&lt;br&gt;a. Clinicians who can make decisions about care&lt;br&gt;b. Patients, carers and families, in accordance with the wishes of the patient&lt;br&gt;6.10 The health service organisation ensures that there are communication processes for patients, carers and families to directly communicate critical information and risks about care to clinicians</td>
<td>☑ Requirements for effective clinical communication of critical information are identified&lt;br&gt;☑ Requirements for escalation of care are identified</td>
</tr>
<tr>
<td><strong>Correct identification and procedure matching</strong>&lt;br&gt;Systems to maintain the identity of the patient are used to ensure that the patient receives the care intended for them.</td>
<td>Correct identification and procedure matching&lt;br&gt;6.5 The health service organisation:&lt;br&gt;a. Defines approved identifiers for patients according to best-practice guidelines&lt;br&gt;b. Requires at least three approved identifiers on registration and admission; when care, medication, therapy and other services are provided; and when clinical handover, transfer or discharge documentation is generated</td>
<td>☑ Requirements for safe and for correct patient identification are identified</td>
</tr>
<tr>
<td><strong>Communicating at clinical handover</strong>&lt;br&gt;Processes for structured clinical handover are used to effectively communicate about the health care of patients.</td>
<td>Clinical handover&lt;br&gt;6.7 The health service organisation, in collaboration with clinicians, defines the:&lt;br&gt;a. Minimum information content to be communicated at clinical handover, based on best-practice guidelines&lt;br&gt;b. Risks relevant to the service context and the particular needs of patients, carers and families&lt;br&gt;c. Clinicians who are involved in the clinical handover&lt;br&gt;6.8 Clinicians use structured clinical handover processes that include:&lt;br&gt;a. Preparing and scheduling clinical handover&lt;br&gt;b. Having the relevant information at clinical handover&lt;br&gt;c. Organising relevant clinicians and others to participate in clinical handover&lt;br&gt;d. Being aware of the patient’s goals and preferences&lt;br&gt;e. Supporting patients, carers and families to be involved in clinical handover, in accordance with the wishes of the patient&lt;br&gt;f. Ensuring that clinical handover results in the transfer of responsibility and accountability for care</td>
<td>☑ The guideline acknowledges the need for local protocols to support transfer of information, professional responsibility and accountability for some or all aspects of care</td>
</tr>
</tbody>
</table>
### NSQHS/EQuIP National Criteria

#### Actions required

**NSQHS Standard 8: Recognising and responding to acute deterioration**

<table>
<thead>
<tr>
<th>NSQHS/EQuIP</th>
<th>Actions required</th>
<th>Evidence of compliance</th>
</tr>
</thead>
</table>
| Clinical governance and quality improvement to support recognition and response systems | Integrating clinical governance  
8.1 Clinicians use the safety and quality systems from the Clinical Governance Standard when:  
a. Implementing policies and procedures for recognising and responding to acute deterioration  
b. Managing risks associated with recognising and responding to acute deterioration  
c. Identifying training requirements for recognising and responding to acute deterioration  
Partnering with consumers  
8.3 Clinicians use organisational processes from the Partnering with Consumers Standard when recognising and responding to acute deterioration to:  
a. Actively involve patients in their own care  
b. Meet the patient’s information needs  
c. Share decision-making  
Recognising acute deterioration  
8.4 The health service organisation has processes for clinicians to detect acute physiological deterioration that require clinicians to:  
a. Document individualised vital sign monitoring plans  
b. Monitor patients as required by their individualised monitoring plan  
c. Graphically document and track changes in agreed observations to detect acute deterioration over time, as appropriate for the patient | ☑ The guideline is consistent with National Consensus statements recommendations  
☑ The guideline recommends use of tools consistent with the principles of recognising and responding to clinical deterioration  
☑ Consumer information is developed for the guideline |

#### EQuIP Standard 12 Provision of care

**Criterion 1: Assessment and care planning**  
12.1 Ensuring assessment is comprehensive and based upon current professional standards and evidence based practice

12.1.1 Guidelines are available and accessible by staff to assess physical, spiritual, cultural, physiological and social health promotion needs

☑ Assessment and care appropriate to the cohort of patients is identified in the guideline  
☑ The guideline is based on the best available evidence
