April 2017

Wet weather means more mozzies

Wet weather can also bring with it some uninvited guests—mozzies!

The recent wet weather following cyclone Debbie has caused an increase in mosquito numbers in our region.

Sunshine Coast Hospital and Health Service public health physician Dr Sean Hosein said residents had also raised concerns about mosquito bites and health.

“It’s very important to protect yourself and family from mosquito bites and to further prevent mosquito breeding by checking around your home and yard for breeding sites where there is standing water,” Dr Hosein said.

“It is important to cover up and take precautions against mosquito bites, especially when camping, fishing or enjoying other outdoor activities.

“Different types of disease-carrying mosquitoes can bite at different times of the day, so it’s important to be vigilant at all times.”

Tips to prevent bites and protect your health

- Wear long, loose and light coloured clothing.
- Use insect repellent containing DEET or Picaridin; particularly during dusk and dawn hours when most mosquitoes are active. Read and follow repellent label directions, especially for infants and children.
- Install or repair insect screens on doors and windows, especially in sleeping areas. If you are become unwell with high fevers, rash or joint pain please seek medical advice.

Tips to prevent mosquito breeding and protect your home

Regularly check around your home, especially following wet weather for evidence of mosquitoes, larvae and mosquito breeding environments. You can:

- Tip out, and wipe out any standing water from things like plastic containers, tarpaulins or buckets.
- Store anything that can hold water undercover or in a dry place, including work equipment, surplus materials or trailers, and keep bins covered.
- Throw out any rubbish lying around like unused or empty containers, tyres, and keep worksites tidy.
Media statement

Under the Public Health Act 2005, you could be fined by your local council if your home and yard promotes the breeding of mosquitoes.
