REVISIONS

Introduction

The 2013-14 radiology services profile provides an overview of medical imaging service performance across all Hospital and Health Services (HHSs). Data is collected via a manual process that involves completion of a data collection form (Appendix 1) by each HHS medical imaging service. The information is collated and analysed by Radiology Support, Health Support Queensland (HSQ).

Data has been successfully collected for six years, allowing comparisons to be made back to 2008-09. However, some facilities were unable to provide all the information requested (refer to Appendix 16 for data collection compliance).

Please note that the data provided in this report is presented as an information source only; it may be subject to change and should be verified with the individual HHS.

Summary of results

Workload

In 2013-14, 1.8 million medical imaging examinations were provided at 128 Queensland Health facilities utilising 622 equipment units. There has been a 3% increase in medical imaging examinations over the past year with an overall increase of 15% since 2008-09 (Appendix 3). The most significant increase by medical imaging modality was in CT from 282,633 examinations in 2012-13 to 303,697 in 2013-14, an increase of 7%. However, this correlates with the 6% increase in the number of CT equipment units from 35 to 37 scanners.

North West HHS recorded the most significant increase in examinations from 20,745 in 2012-13 to 23,581 in 2013-14, an increase of 14%. Metro North and Torres Strait-Northern Peninsula HHSs both experienced slight reductions in examination numbers. Metro North examinations reduced by 1% from 428,675 to 423,770, while Torres Strait-Northern Peninsula examination numbers reduced by 4% from 3,757 to 3,588. Gold Coast HHS experienced a 9% increase in examination numbers from 160,936 in 2012-13 to 174,883 in 2013-14.

Reporting rates and turnaround times

Reporting rates have increased steadily from 79% in 2008-09 to 89% in 2012-13 and 93% in 2013-14. The percentage of reports available within 24 hours also increased from 39% in 2008-09 to 66% in 2013-14. A six year comparison of reporting rates for all HHSs is provided in Appendix 7. The lowest reporting rates were recorded by the Gold Coast HHS with 66% of examinations reported and 34% reported within 24 hours. However, reporting rates for Gold Coast HHS have improved significantly since July 2014 with rates of 88% recorded for July and 97% for August and September 2014.

In 2013-14, 713,699 examinations (43%) were reported by privately employed radiologists. 13 HHSs utilised a private partner for some or all of their radiology reporting.

Workforce

Non-medical FTE increased by 3% from 1,234 to 1,272, comparative to the overall increase in exams performed. The most significant increases in non-medical FTE workforce numbers were at the Gold Coast and Mackay HHSs, with a 23% and 22% increase respectively. The number of X-ray operators has increased slightly from 327 in 2012-13 to 338 in 2013-14. X-ray operators provide general X-ray services (or support a sole radiographer) at 93 rural and remote facilities.

Appointment waiting times

Average waiting times across all modalities have improved since 2012-13 (see Appendix 9). In 2013-14, the average wait for CT, MRI, ultrasound or angio/interventional study was one day for inpatients and between three and 10 days for outpatients. However, there were lengthy wait times for outpatients in some HHSs, examples include:

- 40 days and 30 days for ultrasound at Gold Coast/Robina and Princess Alexandra hospitals, respectively.
- 60 days and 30 days for angio/interventional studies at Cairns and Robina hospitals, respectively.
- 90 days and 30 days for MRI at Cairns and Royal Children's hospitals, respectively.

Revenue

Patient billing revenue is identified in Appendix 14. 67 facilities stated that they had patient billing processes in place for Medicare, DVA and/or workers compensation. 56 facilities provided the gross revenue billed, totalling \$59 million.

Radiology informatics

While significant progress has been made over the last six years in terms of on-line access to images and reports, a number of challenges remain. These include access to appropriate information for those clinicians outside Queensland Health and the seamless sharing of studies between different Picture Archiving and Communication Systems (PACSs). In 2013-14, 46 facilities (including the Mater hospitals) identified a total of 323,052 studies transferred between PACSs. The majority of these transfers required manual intervention.

Acknowledgments

This report is made possible by the data contributions of Queensland Health, Mater and private sector medical imaging staff across all facilities.

Contributing authors (alphabetically): Terri-Anne Duckworth, Allira Griffiths, Robert Nemeth, Tanya Oliver.
