

Smart Referrals

Extracting information from clinical software

Smart Referrals extracts relevant patient information from the clinical software, this occurs when the application is opened. Extracted information is marked with a padlock icon  and cannot be edited, see Figure 1.

Editing extracted data

Edit the data in the clinical software and click **Refresh** in Smart Referrals footer, Figure 2, to extract the most recent data. All information entered on the referral will be retained when Smart Referrals is refreshed.
