How will the Database of Research Activity benefit me as a researcher?

- It is an open advertisement detailing your study and may help recruit more participants
- It may be used by industry and other researchers to find potential collaborators for future studies
- It may be used by researchers to help refine their own work so as to not repeat unnecessarily something that has already been done many times over
- It may be used by researchers to help formulate ideas on where there are gaps in the research for a particular therapeutic area

How up to date is the information?

Studies are initially being loaded on a monthly basis to get the database going, but will slow to a quarterly update. Completed studies will be removed within the same time frames also.

What details will be published to the Database of Research Activity?

The following information will be uploaded to the Database of Research Activity web site:

- HREC Reference
- SSA Reference
- Full title
- Short title
- Multi-site or single site
- Study Type
- Investigator name
- Investigator email
- Contact name
- Contact email
- Sponsor name
- Site name
- Anticipated start date
- Anticipated finish date
- Disease category

How do I get my study published to the Database of Research Activity?

You will be asked to authorise and consent to the publication to the Database of Research Activity each time you complete a Site Specific Assessment application for each new study you wish to commence. If, however you have a study that is currently running and you wish to have the details published to the Database of Research Activity please contact the Research Ethics and Governance Unit on REGU@health.qld.gov.au
