

### **Cancer Care Nutrition Tutorial**

#### Introduction

The following tutorial has been developed by the Dietitian and Nutritionist Clinical Education Network (DANCEN) in 2017 for tertiary students undertaking professional clinical placements with QLD Health services and is based on a tutorial originally created by QLD Health dietitians in Mackay.

- This tutorial can be completed individually or as a group, with supervisor/preceptor direction or independently. It is designed as a learning activity to stimulate thought and further enquiry into nutrition in cancer care.
- Reference to the tutorial answers is suggested after:
  - Attempting to complete the first part of the tutorial from what you already know
  - Clarifying these responses and/or researching the answers by referring to text books, uni notes, best practice guidelines, literature references, other professionals and/or online educational and patient focussed websites.
- Discussion of your responses with your supervisor/preceptor is recommended to ensure you gain the maximum benefit from this activity.

#### **Useful References**

# **Background and Definitions**

1) What are the main characteristics of cancer cells? (List at least 3)

•	
•	
2) Match the four subtype	s of cancer with their definition:
	Choose from:
A. Carcinoma	1. An acute or chronic disease characterised by an abnormal increase in the number of white blood cells in the tissues and often in the blood
B. Sarcoma	and often in the blood
	2. A usually malignant tumour of lymphoid tissue
C. Leukemia	<b>3.</b> A malignant tumour arising in tissue of mesodermal origin (as connective tissue, bone, cartilage, or striated muscle)
D. Lymphoma	4. A malignant tumour of epithelial origin

Chondro-	
Osteo-	and the second s
Hemangio-	gland
Lympho-	cartilage —
Melano-	red blood cell
Myelo-	blood vessels
Erythro-	livel
Myo	
Lipo-	
Adeno-	COLOR P
Hepato-	- U
	bone —

## **Health Professional Roles**

5)	What are some of the main features of the role of the Dietitian working with oncology patients? (List at least 4)
	•
	•
	•
	•
6)	List some aspects of roles of other Allied Health Professionals who would likely be involved in a multi-disciplinary cancer care team?
	Social Worker –
	Speech Pathologist –
	Psychologist –
	Occupational Therapist –
	Cancer Care Co-ordinator –
	Physiotherapist-
	Nutrition Impact Symptoms
	harran harran
7)	Suggest some possible strategies to manage the following nutrition impact symptoms related to cancer treatment?
•	Decreased appetite
•	Pain with chewing & swallowing

Nausea & vomiting

•	
8) Match the following tech meanings:	nical terms for symptoms or conditions to their
3	Choose from:
A. Oesophagitis	Low neutrophil blood count
B. Mucositis	2. Dry mouth
C. Xerostomia	3. Inflammation of mucous lining of mouth
D. Dysphagia	<ol> <li>Inflammation and ulceration of GIT mucous membrane</li> </ol>
E. Stomatitis	5. Inflammation of the lining of the oesophagus
F. Endentulous	6. Difficulty swallowing
G. Neutropenia	7. Restricted ability to open the mouth
H. Trismus	8. No teeth
impact on dietary intake issues?	ollowing side effects of cancer and treatment may How would you help patients overcome these
<ul><li>Taste Changes</li><li>Fatigue</li></ul>	

Diarrhoea & constipation

Dry mouth

• Depression
• Pain
10) Which of the following cancers and treatments should be routinely screened for malnutrition?
Cancers of the head and neck
Lymphoma
Cancers of the GI tract
Cancers in the chest area
Leukaemia
Cancers in the pelvic region
Breast cancer
High nutritional risk chemotherapy regimens (Cisplatin, ECF, FOLFIRI)
Combined chemotherapy and radiation
11) What are some of the possible consequences of inadequate nutrient intake for patients undergoing cancer treatment? (List at least 4)
•
•
•

# **Nutritional Management Goals**

12)Briefly outline some of the nutritional goals for dietary management when cancer treatment has a curative intent and a palliative intent:
a) Curative intent (List at least 3)
•
•
•
b) Palliative Intent (List at least 3)
•
•

## **Case Study**

# Briefly outline how you would assess and treat this patient from initial referral to discharge.

MJ is a 64 year old male who has commenced chemotherapy for stage III-B bowel cancer. He has recently had a high anterior resection with a stoma.

MJ reports a current weight of 77kg with a loss of 3 kg in past month, height 1.78m. Usually his weight is stable at 80kg.

No changes in bowel habits reported. He reports feeling fatigued but can manage usual activities. He also reports eating less than usual for 6 weeks due to low appetite and the development of nausea in the past week.

Biochemistry: Protein 53 (NR 60-83), Albumin 28 (NR 35-50), other biochemistry results within normal range.

MJ is married with a supportive wife; he is a retired mechanic but still helps his son in law at his garage most days.

- a) What is MJs current and usual BMI?b) What % weight has MJ lost?c) What clinical information do you need to find out for your assessment?d) What nutrients would you target when completing a diet history and what other factors would you consider?
- e) How would you determine nutritional status?

f) In your assessment you note no evidence of muscle or fat store depletion. What is MJs current nutritional status?
g) What is your nutritional diagnosis?
h) What is your plan?
j) Outline your plans for managing the decrease in appetite (what information would you need to find out and what general advice would you give?).
