

Z57 Occupational exposure to risk-factors

November 2018

Did you know that there are a number of ICD-10-AM diagnosis codes relating to risk factors for occupation exposure?

- Z57.0 Occupational exposure to noise
- Z57.1 Occupational exposure to radiation
- Z57.2 Occupational exposure to dust
- Z57.3 Occupational exposure to other air contaminants
- Z57.4 Occupational exposure to toxic agents in agriculture
- Z57.5 Occupational exposure to toxic agents in other industries
- Z57.6 Occupational exposure to extreme temperature
- Z57.7 Occupational exposure to vibration
- Z57.8 Occupational exposure to other risk-factors
- Z57.9 Occupational exposure to unspecified risk-factor

Where a condition is documented as being caused by occupational exposure (for example being due to exposure in the workplace during the performance of occupational duties), a code in the range Z57 Occupational exposure to risk factors can be assigned in addition to the condition code. The capture of codes such as this can help to provide context to other diagnosis codes assigned. It can also help with identifying health problems and assist with service planning.
