

Mental health services

CSCF v3.2

Module overview

Please note: This module must be read in conjunction with the Fundamentals of the Framework (including glossary and acronym list).

The Mental Health Services module represents a range of mental health services for people in Queensland. Mental health is a specialist area of healthcare promoting optimal quality of life for people with mental disorders or mental health problems. Mental health services are concerned with the assessment, diagnosis, monitoring and treatment of people who have a mental illness or disorder characterised by a clinically significant disturbance of thought, mood, perception, memory and/or behaviour. Fundamental principles underpinning effective mental health services involve consumer-centeredness, family/carer involvement and recovery planning.

Mental health services address the needs of a broad mix of patient types across the entire age spectrum (children, adolescents, adults and older persons). A person's need for mental health services can be short, medium, long term or intermittent, and often spans various levels of care and service areas across the health continuum. Authorised mental health services (AMHS) under the *Mental Health Act 2016* are listed on the Queensland Health internet site at <https://www.health.qld.gov.au/clinical-practice/guidelines-procedures/clinical-staff/mental-health/services/default.asp>

The delivery of mental health services routinely considers and responds to the special needs that may be associated with the mental health of:

- Aboriginal and Torres Strait Islander peoples
- people of culturally and linguistically diverse backgrounds
- people living in rural and remote areas
- people in out-of-home care
- people with a comorbidity or complex needs—this may include, but is not restricted to, people with a mental health diagnosis as well as:
 - an intellectual disability
 - a substance-use disorder
 - a dementing illness or other brain disorder/s
 - severe or complex medical problems

- a sensory impairment
- a forensic history.

For the purpose of this module, the term:

- **dedicated pharmacy service** refers to a pharmacy that is either based on the hospital campus or is a nominated pharmacy in the community with which a service agreement has been established for the delivery of mental health pharmacy services, with these services delivered according to requirements outlined in the Australian Council on Healthcare Standards
- **extended-hours** refers to hours of service provided outside of business hours and are determined by the service
- **psychogeriatric** refers to older persons mental health services which may include dementia services
- **qualification** refers to either formal qualification/s from a higher education institution such as a university, at either under-graduate or post-graduate level, or informal qualification/s obtained as part of ongoing professional development, employer-based in-service program, or a College / Professional Association.

By national convention, the accepted term used when referring to a mental health patient is **consumer**, with consumers supported by their family and/or carers. However, on occasion the terms **patient**, **people** and **person** have been used in the module to maintain consistency with other modules.

The Mental Health Services module consists of four sections as described in Table 1:

Section 1: Adult Services

Section 2: Child and Youth Services

Section 3: Older Persons Services

Section 4: Statewide and Other Targeted Services.

Table 1: Mental health services defined in the CSCF

Service section	Service subsections	Service subsection notes
1. Adult Services	1.1 Ambulatory Services	Levels 1–6, including services delivered by Continuing Care Teams, Mobile Intensive Treatment Teams and community-based Acute Care Teams Levels 1–6, including services delivered by Continuing Care Teams, Mobile Intensive Treatment Teams and community-based Acute Care Teams
	1.2 Acute Inpatient Services	Levels 2–6. Private sector commences at Level 3 for non-ablative neurosurgical procedures only, otherwise commences at Level 4

Service section	Service subsections	Service subsection notes
	1.3 Non-Acute Inpatient Services	Levels 4–6, including criteria for Community Care Units, Secure Mental Health Rehabilitation Units, and Acquired Brain Injury and Mental Health Units
2. Child and Youth Services	2.1 Ambulatory Services	Levels 1–6
	2.2 Acute Inpatient Services	Levels 2–6
	2.3 Non-Acute Inpatient Services	Level 5
3. Older Persons Services	3.1 Ambulatory Services	Levels 1–6
	3.2 Acute Inpatient Services	Levels 2–6
4. Statewide and Other Targeted Services	4.1 Adult Forensic Services	Level 6 (relevant to public sector mental health services only)
	4.2 Child and Youth Forensic Services	Level 5 (relevant to public sector mental health services only)
	4.3 Deafness and Mental Health Services	Level 6 (relevant to public sector mental health services only)
	4.4 Eating Disorders Services	Level 6
	4.5 Emergency Services	Levels 4–5, including services delivered by hospital-based Acute Care Teams (relevant to public sector mental health services only)
	4.6 Evolve Therapeutic Services	Levels 4–5 (relevant to public sector mental health services only)
	4.7 Homeless Health Outreach Services	Level 5 (relevant to public sector mental health services only)
	4.8 Perinatal and Infant Services	Levels 3–6
	4.9 Transcultural Services	Level 6 (relevant to public sector mental health services only)

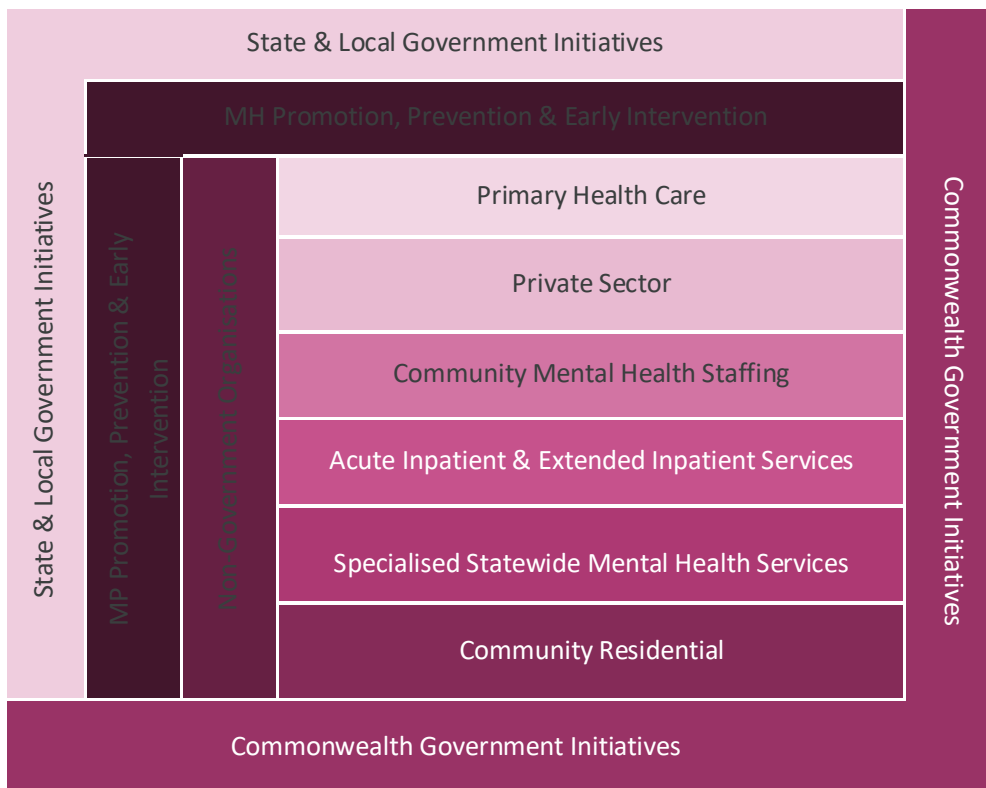

Note: Sections held over until next review of CSCF were Older Persons Services, Non-Acute Inpatient Services; and Statewide and Other Targeted Services including Intellectual Disability and Mental Health Services, Consultation-Liaison Mental Health Services, and Early Psychosis Services.

An integrated Queensland mental health service system

A strong focus on the integration of mental health services across Queensland ensures people living with mental illness have access to the right care and support at the appropriate time. The mental health service system offers a range of inter-connected clinical and community service options to ensure an individual’s care is coordinated and responds to changing needs over time.

Along the continuum, mental health care may take place in a number of settings, including a general acute unit, a dedicated mental health unit or hospital, a residential program, an institutional facility (e.g. a prison), a community-based setting or in the person’s home. All service components within the Queensland mental health service system are integrated and work together to promote continuity of care (Figure 1).

Figure 1: Queensland Mental Health Service System¹

Note: Private sector includes acute inpatient and ambulatory mental health services.

Private sector mental health service system

Private sector mental health services recognise people with a mental illness or disorder ideally require access to a comprehensive range of services, with an emphasis on coordination, integration and individualised care.

Care options generally include a comprehensive continuum-of-care model, incorporating multidisciplinary services and care across a range of settings appropriate for the consumer. The full continuum of care ranges from intensive, admitted, overnight treatment to day hospital, outpatient and community care, and 24-hour access to psychiatric emergency care for patients of the private mental health service system.

At all times, admission, treatment and care are under the supervision of the treating psychiatrist, irrespective of the care setting.

Mental health service areas

The Mental Health Services module defines broad service areas separately so detailed definitions can be provided for each specific service area. In line with the framework used for reporting under the National Mental Health Strategy, the service areas are broadly defined as follows:

- **Ambulatory mental health services** deliver mental health care to non-admitted consumers, including services at hospital outpatient clinics and non-hospital community mental health services, crisis or mobile assessment treatment services, and day programs. Services are streamed according to age groups.
- **Acute inpatient mental health services** deliver mental health care to admitted consumers, usually on a short- to medium-term and intermittent basis. Services are streamed according to age groups.
- **Non-acute inpatient mental health services** deliver mental health care to admitted consumers over a long-term period and involve a specialist rehabilitation component to care. Previously, many of these services have been known as extended treatment/care services. Services are streamed according to age groups.
- **Statewide and other targeted mental health services** deliver a statewide, centrally coordinated mental health service and are defined separately for at least one of the following reasons:
 - they deliver statewide mental health care
 - they provide mental health care across the age spectrum
 - they deliver targeted mental health care programs for nominated populations.

General support services

Documented processes and collaborative partnerships—relevant to the service being provided and individual consumer need—should be established between a mental health service and a range of:

- clinical support services including (but not limited to) registered medical practitioners (general practitioners); health services (acute, non-acute and ambulatory) for the target population; and alcohol, tobacco and other drug agencies
- non-clinical support services including (but not limited to) education, housing, vocational and other appropriate government agencies (e.g. Queensland Police Service) and non-government agencies.

Risk management

In addition to risk management outlined in the Fundamentals of the Framework, there are specific risk management requirements relevant to mental health services. These may include the management of risk behaviours, such as violence or self-harm, or risk issues, such as neglect or maltreatment. As the consumer's assessed level of risk (and/or complexity) increases, a higher level of mental health service capability is required to ensure the safety of those involved.

Risk and complexity are defined in the module using the following parameters, which were adapted from the American Association of Community Psychiatrists (2000)²:

- **Risk of harm** refers to potential to cause significant harm to self or others
- **Functional status** refers to the degree to which social responsibilities, interactions with others, vegetative status and self-care can be managed
- **Comorbidity** refers to complications arising in the context of co-existing medical illness, substance use, intellectual disability or other psychiatric disorder
- **Recovery environment** refers to environmental factors (including family support) that contribute to the onset or maintenance of mental illness or that may support efforts to achieve/maintain mental health
- **Treatment and recovery history** refers to recognition of a person's historical experience and its potential to inform the present episode of care
- **Engagement** refers to consideration of the person's understanding of illness and treatment, in addition to their ability or willingness to engage in the treatment and recovery process.

In the application of the American Association of Community Psychiatrists' risk matrix (Table 2), consideration should be given to the consequences, immediacy, magnitude and likelihood of each domain. Risk factors can be categorised as either static, historical factors (e.g. gender, age) or dynamic, changeable factors (e.g. increased stress due to a life event). A range of sources (relevant to the individual case) should be accessed in the assessment of risk, such as the consumer, the consumer's carers and relatives, the Queensland Police Service and the referral source.

Consideration should also be given to the complexity of each presentation or situation. For example, a person presenting with several identified 'low-risk' factors might be more accurately assessed as 'moderate risk' due to the complexity of their situation. As situational complexity increases, it is expected that input from a higher level of service is required.

The risk matrix should be used as a guide and is not intended to replace clinical risk assessments conducted on an individual basis by experienced and qualified mental health clinicians. Furthermore, it is acknowledged this risk matrix does not reflect the risk parameters of all age groups (e.g. infants) and does not necessarily take into account individual special needs or vulnerabilities. Therefore, this risk matrix should be considered as only one component of a suite of risk assessment tools.

Table 2: Risk matrix—a guide to defining risk while using the Mental Health Services module

	Risk of harm	Functional status	Comorbidity	Recovery environment	Treatment and recovery history	Engagement
<p>Low risk</p> <p>Requires only general level of observation and/or standard level of care that might focus on monitoring and/or respite.</p>	<ul style="list-style-type: none"> No current suicidal, homicidal ideation, plan or intentions Low likelihood for harmful behaviour Ability to care for self with support Intact impulse control 	<ul style="list-style-type: none"> Transient impairment in functioning, but able to maintain some meaningful relationships Minor or intermittent disruption/s to usual activities 	<ul style="list-style-type: none"> Evidence that medical, substance use and/or other psychiatric illnesses or problems have potential to develop, which may affect presenting problem 	<ul style="list-style-type: none"> Life circumstances predominantly stable At least one source of support available 	<ul style="list-style-type: none"> Where relevant, prior experience/s with treatment/recovery been predominantly successful 	<ul style="list-style-type: none"> Potential to understand and accept illness and its effects (with support and psychoeducation)
<p>Moderate risk</p> <p>Requires visual proximity and/or regular</p>	<ul style="list-style-type: none"> Current suicidal or homicidal ideation without intent, plan or past history Potential for harmful behaviour 	<ul style="list-style-type: none"> Becoming conflicted, withdrawn, alienated or troubled in most significant relationships, but maintains control over impulsive or 	<ul style="list-style-type: none"> Medical, substance use and/or other psychiatric illnesses or problems exist that may affect presenting problem and will then require 	<ul style="list-style-type: none"> Significant discord or difficulties in family or other important relationships Recent important loss or deterioration of 	<ul style="list-style-type: none"> Previous or current treatment/recovery associated with partial remission or control of symptoms Previous treatment/ 	<ul style="list-style-type: none"> Some variability in understanding or accepting illness, associated disability and/or comorbidities Limited commitment to change and

		aspect of personal responsibility in usual roles (e.g. parental, citizen, occupational).	and impair potential for recovery from presenting problem.			

Source: Adapted from the American Association of Community Psychiatrists (2000)

The reader should consult other key documents, such as the **Model of Service for Mental Health in Queensland** (public sector specific), to inform their knowledge of the mental health system and, more specifically, to understand clinical processes and workforce roles.

For the purposes of this module, age-specific services are generally categorised as follows:

- Child and Youth Services—0 to 18 years
- Adult Services—over 18 years
- Older Persons Services—65 years and older who meet specific criteria associated with the ageing process and complex mental health needs.

However, there will be some exceptions to these age-range guides, based on factors such as culture, personal background or need, clinical presentation, developmental status or the available service setting. Service managers and providers are required to consider these issues and the relevant site-specific policies and procedures before deciding which section of the module is most relevant to their service provision.

Older persons services must consider the following when planning and coordinating services:

- maintenance of function and the ability to remain at home (if preferred)
- family/carer risk factors, including high rates of morbidity among carers
- access to, and collaboration with, appropriate health and aged-care supports
- medical comorbidity, especially chronic diseases related to ageing
- comorbid cognitive disorders
- sensory impairment
- social isolation
- grief and loss.

Where a health service provides a consumer with both mental health care and general healthcare, the service is required to comply, for instance, with the relevant components of the Children's Services modules (for consumers aged up to 18 years), Medical Services module (for consumers aged over 18 years) and other relevant CSCF modules, in addition to the Mental Health Services module.

Service networks

In addition to what is outlined in the Fundamentals of the Framework, specific service network requirements include:

- services providing mental health care must have documented processes and collaborative working partnerships with government and/or non-government organisations, support agencies and family support services
- documented processes are to be established and maintained between both lower and higher level services of the one service network (e.g. between Level 2 and 5 of acute inpatient services) and across service networks (e.g. across ambulatory and acute inpatient services).

Service requirements

In addition to what is outlined in the Fundamentals of the Framework, specific service requirements, policy and procedure requirements, documented processes, integrated mental health recovery plans, and common elements for inpatient care relevant to all mental health services are detailed below.

Specific service requirements:	<ul style="list-style-type: none">• All screening, assessment, treatment and planning tools are age-specific.
	<ul style="list-style-type: none">• Routine clinical detail collected to inform assessment, diagnosis, intervention and/or recovery.
	<ul style="list-style-type: none">• Assessments and interventions reflect age-appropriate, evidence-based care.
	<ul style="list-style-type: none">• Assessments and interventions in Levels 4, 5 and 6 services reflect multidisciplinary input.
	<ul style="list-style-type: none">• Assessments and interventions are associated with a documented case review process, and are conducted in accordance with the National Standards for Mental Health Services and for involuntary consumers, the Mental Health Act 2016.
	<ul style="list-style-type: none">• Service delivery reflects specific needs of target population and individual.
	<ul style="list-style-type: none">• Consumers and family/carers are supported to initiate contact with and engage in all ambulatory, inpatient and community-based mental health, health and support services.
	<ul style="list-style-type: none">• Consumer's individual educational program is coordinated with and integrated into their inpatient or day program, wherever appropriate.
	<ul style="list-style-type: none">• Multidisciplinary (and where possible, multisystemic) collaboration for review of all care plans in cases where risk status of mental health consumers escalate beyond capability of current service level (or in case of emergency mental health presentations), including consultation-liaison with higher level mental health service (which may be via telehealth facilities).
	<ul style="list-style-type: none">• Acknowledgement of need for multisystemic input into all mental health care.
	<ul style="list-style-type: none">• All episodes of care are documented in a health record.
	<ul style="list-style-type: none">• Consideration of decision-making capacity and/or role of alternate, legally appointed individual or agency in decision-making on behalf of the consumer.
	<ul style="list-style-type: none">• Working knowledge of processes involving involuntary treatments and consumer rights under the Mental Health Act 2016 as issues may arise concerning ability of children, adolescents and adults to consent to treatment.
	<ul style="list-style-type: none">• Level 3 to 6 ambulatory services and Level 4 to 6 inpatient services deliver integrated mental health care and ensure continuity of care for those accessing services.
	<ul style="list-style-type: none">• Level 4 to 6 services conduct audits of effectiveness of clinical and referral pathways.
	<ul style="list-style-type: none">• Consumers with eating disorders (who are on refeeding program) should be assumed to be at risk of refeeding syndrome and be managed accordingly in an inpatient setting.

	<ul style="list-style-type: none"> • For all services caring for children and/or adolescents, including Subsections 4.1, 4.3 and 4.5 of Section 4, Statewide and Other Targeted Services, and occasional adult service, there is a documented process and/or contact with a child protection liaison officer with clear child protection referral processes in place. • Clinicians delivering Level 6 services represent a critical mass of expertise, and provide statewide leadership and education in specialist mental health clinical management to other service providers. • Provide relevant clinical indicator data to satisfy accreditation and other statutory reporting obligations.
Current policy and procedure:	<ul style="list-style-type: none"> • Should explicitly outline care pathways and inform assessment, diagnosis, admission, monitoring, treatment, evaluation, ongoing care, referral, transfer and discharge of mental health consumers. • Reflect specific needs of target population and individual. • Inform 24 hours a day response to psychiatric emergencies and high-risk situations. • Inform management of high-risk behaviour/s and address any (but not be limited to) relational, pharmacological, physical and environmental interventions used in management and containment of violent and/or self-harm behaviours. • Inform short-term, high-dependency care and stabilisation of mental health consumers awaiting transfer for inpatient admission. • Inform identification, prevention, response to and evaluation of adverse clinical events. • Inform safe administration and ongoing management of consumers receiving electroconvulsive therapy (ECT) and non-ablative neurosurgical procedures in services authorised by the Mental Health Act 2016 to provide these services, and should inform how to manage special needs and/or age-specific needs, and vulnerabilities of consumers accessing the service. • Inform management of non-active consumer cases. • Inform processes of consultation-liaison between higher level services (Levels 4, 5 and 6) and lower level services. • Inform refeeding programs used to treat inpatients with eating disorders, and should align/comply with Australian and/or local standards and requirements. • Inform continuing care of mental health consumers admitted to / discharged from inpatient mental health care.
Documented processes should:	<ul style="list-style-type: none"> • Demonstrate links and collaborative partnerships with other mental health services (ambulatory, acute inpatient and non-acute inpatient) as is relevant to target population. • Demonstrate links with local government, non-government organisation/s and other general support services. • Reflect timely responses and specific needs of individuals.

	<ul style="list-style-type: none"> • Demonstrate involvement of consumers and carers in planning, operation, monitoring and evaluation of mental health services (Levels 3 to 6).
Integrated mental health recovery plans should include:	<ul style="list-style-type: none"> • Assessments pertaining to each person's family/carer factors, including family/carer risk factors. • Risk assessments pertaining to each mental health presentation. • Developmental/educational/vocational tasks relevant to consumers • Family/carer and community roles in ongoing care and support of the person.
Common elements for inpatient care include:	<ul style="list-style-type: none"> • Encouragement and support for consumers (in conjunction with their family/carers) to participate, when clinically indicated and feasible, in efforts to carry out basic, developmentally appropriate activities of daily living during hospitalisation, and some other general activities (such as recreational, social and educational/vocational activities) may be offered and/or facilitated. • Provision of services reducing stress related to resuming normal activities in the post-hospitalisation environment (e.g. promoting access to community services associated with ongoing consumer care and mobilising family resources). • Where the service level capability is stipulated as short-term or intermittent care only, but medium- or long-term care is warranted for any given consumer of that service, ongoing and age-specific consultation-liaison is required with a higher level mental health service.

Workforce requirements

In addition to workforce requirements outlined in the Fundamentals of the Framework, specific workforce requirements include:

- each mental health area/unit/service is staffed according to:
 - occupancy rates
 - current severity of illness experienced by consumers
 - special individual needs
 - age-specific needs and vulnerabilities.
- clinicians within Level 4, 5 and 6 services demonstrate high levels of clinical expertise in assessment, intervention and evaluation of consumers presenting with a dual diagnosis of mental health and substance-use disorders, with ongoing professional development accessed in this area.
- clinicians demonstrate ongoing education and training in clinical and safety programs relevant to the practice of mental health service delivery.
- clinicians providing mental health services participate in clinical practice supervision with clinician/s who are qualified and experienced in mental health.
- clinicians providing mental health services for children, adolescents or older persons participate in age-group-specific clinical practice supervision with clinician/s who are qualified and experienced in the respective area/s.

- clinical practice supervision is required on a case-by-case basis if the clinician's contact with mental health consumers or with specific groups of mental health consumers, such as children, is intermittent or limited.

Where relevant to specific service levels:

Medical

- registered medical specialists with credentials in psychiatry demonstrate satisfactory completion of clinical training and possess a Fellowship in Psychiatry recognised by the Royal Australian and New Zealand College of Psychiatrists.
- psychiatry trainees or registrars supervised according to Royal Australian and New Zealand College of Psychiatrists professional documents and guidelines.
- a registered medical specialist with credentials in psychiatry manages the care of consumers receiving ECT in accordance with the *Mental Health Act 2016*.
- a designated medical officer (however titled) accessible 24 hours a day to enact a **Care and Treatment Order for a Child** for all child and youth inpatient facilities.

Nursing

- registered nurses have qualifications and/or experience in mental health.

Allied health

- allied health professionals have relevant qualifications.

Other

- interpreter services (e.g. language and sign language) accessible as required.
- access to mental health workforce and/or associated key stakeholders or service providers as required with expertise in:
 - Aboriginal and Torres Strait Islander mental health
 - transcultural mental health
 - dual diagnosis (e.g. mental health disorder plus alcohol/other drug disorder)
 - consumer and carer support needs
- inclusion of Independent Patient Rights Adviser/s (IPRA) as part of the team providing mental health services (public sector services only).

Section 1 Adult Services

Section 4 Statewide and Other targeted services

.Subsection 41 – Adult Forensic Services

	Level 6
Service description	<ul style="list-style-type: none">• provides highly specialised forensic mental health services to both ambulatory and acute inpatient adult mental health consumers presenting with moderate, high and highest risk/complexity, with acute inpatient components of this service providing acute inpatient mental health care 24 hours a day).• delivered to members of targeted adult population diagnosed with serious mental illness and who have presented with serious and/or complex forensic issues (for some ambulatory services at this level of care, target population may extend to adults diagnosed with serious mental illness and at high risk of offending).• delivered from a range of sites across the state; however, statewide coordination and governance of these services are centralised.• ambulatory service components consist of:<ul style="list-style-type: none">– Court Liaison Service, which provides mental health assessment, liaison, advice and referral for people in police custody and magistrates court environments, including diversion to appropriate mental health services, where appropriate– Prison Mental Health Services, which provide psychiatric assessment, treatment, management, discharge planning and transition support to people in custody– Community Forensic Outreach Service, which assists and builds capacity of integrated mental health services to assess and manage people who have mental illness and are involved in the criminal justice system, or are at high risk of committing an offence.• Inpatient service component consists of:<ul style="list-style-type: none">– high secure service, The Park Centre for Mental Health.(Consumers referred to ambulatory components of this service present with problems ranging from moderate to high risk/complexity, some of whom may demonstrate most extreme comorbidities and/or indicators of treatment resistance).• ambulatory mental health care is provided during service defined hours of business and includes: comprehensive multidisciplinary assessment, such as forensic and risk assessments; medico-legal reporting; targeted specialist interventions by mental health professionals; care coordination / case management; consumer and carer education; documented frequent case review; targeted group programs; all levels of prevention programs / services; consultation-liaison with lower level mental health services; and referral, where appropriate.

	<ul style="list-style-type: none"> • lower level services for adult forensic mental health consumers are delivered as part of core business associated with ambulatory, acute inpatient and non-acute inpatient services, as defined in the Adult Services and Older Persons Services sections of this module.
Service requirements	<p>As per module overview, plus:</p> <ul style="list-style-type: none"> • acute inpatient service components are delivered across one or two sites statewide (from purpose-designed and built facilities) and provide targeted risk management strategies for designated population. • consumers meeting admission criteria for acute inpatient component of this service are unable to be adequately or safely cared for within their local inpatient mental health service and present with problems defined as the highest risk/complexity. • identification, ongoing assessment, monitoring and interventions of complex mental health problems (that may be associated with most complex comorbidities and /or indicators of treatment resistance). • medication management. • extensive clinical detail collected to inform assessment / diagnosis / intervention / recovery, and broader service delivery in all levels of service. • extensive range of primary (e.g. stress management), secondary (e.g. weight management) and tertiary (e.g. psychosis treatment maintenance) prevention services. • statewide clinical forums to assist dissemination of clinical expertise. • services delivered by highly specialised teams that provide mental health care to target population/s, some of whom present with special care needs. • acute inpatient units are authorised mental health services under <i>Mental Health Act 2016</i>. • specialist mental health assessments and interventions conducted by mental health clinicians and health workers of this service. • specialist consultation-liaison to other health and non-health services/agencies for target population. • clinicians providing mental health services participate in clinical practice supervision with clinician/s qualified and experienced in forensic mental health. • may provide extensive range of additional clinical programs and service components, such as an outreach service, telehealth services or an extended treatment program. • as clinically indicated, ECT services may be facilitated and/or provided at this level of service by a mental health service authorised to provide ECT under <i>Mental Health Act 2016</i>.
Workforce requirements	<p>As per module overview, plus a Level 6 ambulatory service requires:</p>

Medical

- access—during business hours—to registered medical specialist with credentials in psychiatry and relevant specialist qualifications and experience in forensic assessment, case management and review.

Nursing

- access—during business hours—to registered nurses with qualifications in mental health and/or extensive mental health experience in forensic assessment, case management and review.

Allied health

- access—during business hours—to multidisciplinary team of allied health professionals with qualifications and experience in forensic mental health, including pharmacy services for mental health.

Other

- access to extensive range of local health / mental health specialties (may be on a visiting basis or by outreach services).

A **Level 6 inpatient** service requires:

Medical

- consumer admitted by / under registered medical specialist with credentials in psychiatry.
- access—24 hours—to registered medical specialist with credentials in psychiatry and relevant specialist qualifications and experience in forensic assessment, treatment, case management and review.
- medical services provided on-site or are in close enough proximity to provide rapid response at all times.

Nursing

- suitably qualified and experienced registered nurse in charge (however titled) of unit.
- registered nurse in charge of each shift is suitably qualified and experienced mental health professional.
- majority of nursing staff on each shift have required qualifications and experience in mental health.

Allied health

- access to multidisciplinary team of allied health professionals with qualifications and experience in forensic mental health including psychology, social work, occupational therapy, speech pathology and dietetics (postgraduate training is desirable).
- access to dedicated pharmacy services for mental health.

	<p>Other</p> <ul style="list-style-type: none"> access to extensive range of local health / mental health specialties (may be on a visiting basis or by outreach services). access to IPRA (public sector only).

Subsection 4.4 – Eating disorders service

Level 6	
Service description	<ul style="list-style-type: none"> • provides specialist resources and support enabling mental health ambulatory and acute inpatient care services 24/7^{3,4} • integrated service delivered to targeted adult population diagnosed with (or at high risk of developing) serious and/or complex eating disorders. • provides acute ambulatory and inpatient mental health care to voluntary and involuntary adult mental health consumers with an eating disorder who present with problems ranging from low to highest risk/complexity, and may have special care needs. • adolescent consumers older than 14 years may access this service, where clinically and developmentally appropriate, and in line with policy and procedural documentation of the eating disorders service. • services may be delivered from a range of sites across the state; however, this service is centrally coordinated. • ambulatory service components may include statewide consultation-liaison service, outpatient assessment and treatment recognition services, specialist outpatient therapy and/or intensive outpatient program (consumers referred to ambulatory service components

present with problems ranging from low to highest risk/complexity, some of whom may demonstrate most extreme comorbidities and/or indicators of treatment resistance).

- acute inpatient service components at this level are co-located with a Level 5 or 6 adult acute inpatient mental health service (consumers meeting admission criteria for acute inpatient component present with problems defined as highest risk/complexity and these consumers are unable to be adequately or safely cared for within their local acute inpatient mental health service).
- service provision includes: comprehensive multidisciplinary assessment; targeted specialist interventions by mental health and medical health professionals; care coordination; consumers and carer education; documented frequent case review; targeted group programs; all levels of prevention programs / services; consultation-liaison with lower level mental health services; and referral, where appropriate.
- lower level services for mental health consumers with an eating disorder are delivered as part of core business associated with ambulatory, acute inpatient and non-acute inpatient services-these service areas are defined in the Child and Youth Services, Adult Services and Older Persons Services sections of this module.

Service requirements

As per module overview, plus:

- authorised service under *Mental Health Act 2016*.
- identification, ongoing assessment, monitoring and interventions of complex mental health problems (that may be associated with most complex comorbidities and/or indicators of treatment resistance).
- integrated approach to identification, assessment and intervention of any co-occurring substance-use disorders.
- targeted clinical programs for individuals / groups / families / carers.
- medication management.
- forward referrals for assessment / diagnosis / intervention as required.
- development of comprehensive individual mental health recovery plan within 1 week of assessment.
- referral to community mental health clinicians on hospital discharge, as appropriate.
- extensive range of primary (e.g. stress management), secondary (e.g. re-feeding syndrome) and tertiary (e.g. treatment maintenance) prevention services.
- psychoeducation for consumers, families/carers and groups (including information about available mental health services, mental health problems and illnesses, indicated treatment options and support services).
- separate clinical services for families / carers, if required.
- specialist mental health assessments / interventions conducted by clinicians of this service.
- specialist consultation-liaison to other health and non-health services / agencies for target population.

- current policy and procedure documentation informs the processes of consultation-liaison with lower level services who provide an eating disorders mental health service.
- documented processes and collaborative partnerships with key stakeholders associated with eating disorder treatment, research and education (e.g. Eating Disorders Association).
- clinicians providing mental health services participate in clinical practice supervision with clinician/s qualified and experienced in eating disorders and mental health.
- may provide extensive range of additional clinical programs and service components, such as an outreach service, telehealth services or a day program.
- as clinically indicated, ECT services may be facilitated and/or provided by mental health service authorised to provide ECT under *Mental Health Act 2016*.
- statewide clinical forums to assist dissemination of clinical expertise.
- extensive clinical detail collected to inform assessment / diagnosis / intervention / recovery and broader service delivery in all levels of service.

Workforce requirements

As per module overview, plus:

- delivered by multidisciplinary team of highly specialised clinicians / mental health professionals.

A Level 6 ambulatory service requires:

Medical

- access—during business hours—to registered medical specialist with credentials in psychiatry and specialist qualifications and experience in eating disorders assessment, case management and review.

Nursing

- access—during business hours—to registered nurses (with qualifications in mental health and/or extensive mental health experience) relevant to the service being provided.

Allied health

- access—during business hours—to multidisciplinary team of allied health professionals with qualifications and experience in eating disorders and mental health.
- access to dedicated pharmacy services for mental health.

	<p>Other</p> <ul style="list-style-type: none"> • access to an extensive range of visiting or local health / mental health specialties. <p>A Level 6 inpatient service requires:</p> <p>Medical</p> <ul style="list-style-type: none"> • consumer admitted by / under registered medical specialist with credentials in psychiatry. • access—24 hours—to registered medical specialist with credentials in psychiatry and specialist qualification and experience in eating disorders assessment, treatment, case management and review. • access—24 hours—to registered medical practitioner (psychiatry registrar / principal house officer / senior medical officer / career medical officer) with credentials relevant to the discipline. • medical services provided on-site or in close enough proximity to provide rapid response at all times. <p>Nursing</p> <ul style="list-style-type: none"> • suitably qualified and experienced nurse in charge (however titled) of unit. • registered nurse in charge of each shift with qualifications in mental health and/or extensive mental health experience. • nursing staff on each shift, two or more of whom have qualifications in mental health and/or extensive mental health experience. <p>Allied health</p> <ul style="list-style-type: none"> • access to, multidisciplinary team of allied health professionals with qualifications and experience in eating disorders and mental health (postgraduate training desirable). • access after-hours to generalist psychology, social work and dietetic services. • access to dedicated pharmacy services for mental health. <p>Other</p> <ul style="list-style-type: none"> • access to extensive range of visiting or local health / mental health specialties. • access to IPRA (public sector only).

*Required only in services where ECT performed

Table note: On-site means staff, services and/or resources located within the health facility or adjacent campus including third party providers. Accessible means ability to utilise a service (either located on-site or off-site) or skills of a suitably qualified person (who may be either on-site or off-site)—without difficulty or delay—via various communication mediums including but not limited to face-to-face, telehealth, telepharmacy, and/or outreach.

Subsection 4.9 – Transcultural service

Level 6	
Service description	<ul style="list-style-type: none"> • capable of providing short-term or intermittent mental health care to low-, moderate- and high-risk/complexity voluntary and involuntary mental health consumers via statewide consultation-liaison and/or outreach mental health service. • integrated service delivered to targeted population across all ages from culturally and linguistically diverse backgrounds, diagnosed with mental illness or present with mental health problems and who may show evidence of range of complexities relating to cultural barriers, migration and settlement issues, some consumers presenting with special care needs. • accessible during business hours with some service components operating on extended-hours basis. • service components consist of: <ul style="list-style-type: none"> – transcultural clinical consultation service providing intake, triage and consultation – range of programs / strategies for promotion, prevention and early intervention of mental illness in target population – cultural consultation service that provides cultural clarification, advice and support (including socio-cultural assessments) and is coordinated by clinicians of Transcultural Mental Health Service with input from range of bicultural / bilingual cultural consultants. • service provision typically includes: multidisciplinary assessment, diagnosis clarification, triage and targeted interventions by transcultural mental health professionals; assistance with care planning / care coordination; consumer and carer education and information; primary and secondary promotion, prevention and early intervention programs; consultation-liaison with other service providers; and referral, where appropriate. • delivered by highly specialised, multidisciplinary team of mental health professionals (psychiatrists, nurses, allied health professionals, cultural consultants and other health workers) with qualifications and experience in transcultural mental health.
Service requirements	<p>As per module overview, plus:</p> <ul style="list-style-type: none"> • care to low-, moderate- and high-risk/complexity voluntary and involuntary mental health consumers via statewide consultation-liaison and/or outreach mental health service. • identification, assessment, monitoring and interventions of mental health problems ranging in risk and complexity (that may be associated with complex comorbidities and/or indicators of treatment resistance). • integrated approach to identification, assessment and intervention of any co-occurring substance-use disorders. • input into targeted clinical programs for individuals / groups / families (transcultural content for group programs delivered by mental health services).

- forward referrals for assessment / diagnosis / intervention as required.
- timely contribution to development of comprehensive and culturally appropriate mental health recovery plan.
- extensive clinical detail collected to inform assessment / diagnosis / intervention / recovery, and broader service delivery in all levels of service.
- access to range of primary (e.g. transcultural stress management resources) and secondary (e.g. culturally tailored programs for mental health literacy and recovery programs) prevention services.
- assertive outreach applicable to service and target population.
- psychoeducation for consumers, families / carers and groups (including information about available mental health services, mental health problems and illnesses, indicated treatment options and support services).
- separate clinical services for families/carers, if required.
- specialist mental health assessments and interventions are conducted by clinicians and health workers of this service, reflecting cultural appropriateness.
- as consultation service, primary clinical responsibility and decision-making for consumer remains with referring service.
- where appropriate, facilitates access for presenting individuals to their local mental health service or other relevant services, including general practitioners and multicultural support services.
- statewide specialist consultation-liaison to other health and non-health services / agencies for target population.
- Mental Health Promotion Prevention and Early Intervention (MHPPEi) activities coordinated and delivered by project officers and/or group facilitators who are suitably qualified and experienced in program topic area and cross cultural work, and are supervised by qualified allied health staff.
- works in partnership with mental health services and non-government specialist providers.
- provides assistance, support and resources to referring mental health service to ensure a culturally appropriate recovery plan is prepared and reviewed for each consumer.
- current policy and procedure documentation maintained for MHPPEi and cultural consultation programs, and integrated into staff induction training.
- documented processes and collaborative partnerships with multicultural services sector (e.g. Department of Immigration and non-government multicultural services, such as refugee services, cultural groups and organisations).
- co-located with authorised service under *Mental Health Act 2016*.

Workforce requirements	<p>As per module overview, plus multidisciplinary team of mental health professionals with qualifications and experience in transcultural mental health, including:</p> <p>Medical</p> <ul style="list-style-type: none"> • access—during business hours—to registered medical specialist with credentials in psychiatry, and relevant specialist qualifications and experience in transcultural mental health in relation to assessment, management and review of culturally and linguistically diverse consumers. • where consumers of clinical consultation service are also consumers of their local mental health service, their ongoing care is coordinated by registered medical specialist with credentials in psychiatry for assessment, treatment, case management and case review. <p>Nursing</p> <ul style="list-style-type: none"> • access—during business hours—to registered nurse with cross-cultural qualifications and experience relevant to service being provided. <p>Allied health</p> <ul style="list-style-type: none"> • access—during business hours—to multidisciplinary team of allied health professionals with relevant specialist mental health and cross-cultural qualifications and experience. • additional allied health support provided to cultural consultation service by registered clinicians with qualifications and experience in delivering transcultural mental health care. • access to senior allied health staff member of the service (in an on-call capacity) for bilingual mental health clinicians who deliver services outside regular business hours. <p>Other</p> <ul style="list-style-type: none"> • access to bilingual consultants. • access to range of visiting or local health / mental health specialties. • clinical and cultural consultation services provided face-to-face, via telehealth facilities or on visiting basis. • access to IPRA (public sector only).
Specific risk considerations	<p>Nil</p>

Support service requirements for transcultural mental health services
